Map Notes

This map is one in a series of maps showing the distribution of selected water chemistry parameters at a scale of 1:500 000.

The source of the groundwater chemistry data is the Nova Scotia Groundwater Chemistry Database (NSGCDB). The NSGCDB was compiled from various federal, provincial, and municipal groundwater chemistry data sources, including well water quality monitoring data from government buildings, and Nova Scotia Environment and Climate Change groundwater chemistry data from regulated public drinking water supplies, pumping wells, municipal groundwater systems and provincial observation wells. The data presented on this map do not include known contaminated sites and likely represent naturally occurring conditions. The distribution of the data is spatially heterogeneous.

Sedimentary, Carbonate/Evaporite, Volcanic, Plutonic, and Metamorphic Groundwater Regions

The boundaries of the various bedrock groundwater regions were based on the dominant lithology, which was interpreted from Fisher and Poole (2006) (Fisher et al. (2002), and modified by Kennedy et al. (2008)) for the Groundwater Regions Map of Nova Scotia. For example, the boundaries of the Carbonate/Evaporite Groundwater Region generally correspond to the boundaries of the Windsor Group, although the Windsor Group also includes other rock types, such as sedimentary bedrock units.

GIS databases, cartography, and reproduction by Gavin Kennedy and Angie Barras of the Nova Scotia Department of Natural Resources and Renewables, Geoscience and Mines Branch, Geological Survey Division, 2022. The GIS databases and map were developed using ArcGIS 10.8.1.

Universal Transverse Mercator Projection (UTM), Zone 20, Central Meridian 63°00' West, North American Datum (NAD) 1983 Canadian Spatial Reference System (CSRS) 98

- Legend**
- Water Chemistry - Barium (µg/L)**
- ≤ 100 µg/L
 - 100 - 500 µg/L
 - 500 - 1000 µg/L
 - > 1000 µg/L
- Groundwater Regions**
- Sedimentary
 - Carbonate/Evaporite
 - Volcanic
 - Plutonic
 - Metamorphic
- Primary watershed boundary
- Groundwater region boundary
- Roads (primary, secondary)
- Rivers/streams
- Coastline
- Boundary (county, inter-provincial)
- Lakes

Parameter	Value	Unit
Number of Samples:	2167	-
Proportion of samples ≤100 µg/L:	68.4	%
Median Concentration:	<100	µg/L
95th Percentile Concentration:	490	µg/L
Maximum Concentration:	3 670	µg/L
Maximum Acceptable Concentration (MAC):	2000	µg/L
Proportion Exceeding MAC:	0.1	%

Barium analyses with a laboratory detection limit ≤100 µg/L were used in the map
