Introduction

The 2024–25 Five-year Highway Improvement Plan outlines government's approach to building, repairing, and maintaining the province's 23,000 kilometres of roads and highways and its 4,100 bridges.

The plan includes major highway and road projects, repaving, major bridge replacements, capital maintenance, and infrastructure work the province plans to pursue annually over the next five years.

Sharing the specific plans early for road improvement in the Five-year Highway Improvement Plan gives the province's roadbuilding sector a better opportunity to prepare for the more than 160 highway improvement projects coming up in the next fiscal year. It also keeps Nova Scotians informed about the important road and bridge improvements being made in their communities.

Gravel Road Program

Nova Scotia has more than 8,400 kilometres of gravel roads and they make up 35 per cent of the provincial road network. In recognition of their importance, the Nova Scotia Government is increasing funding to \$55 million this year, compared to \$40 million last year, for the Gravel Road Capital Program. Funding for the program is used to improve existing gravel roads in rural Nova Scotia. It enables the proactive rebuilding of roads to improve the structure and drainage, resulting in longer-lasting roads, improved safety, and reduced maintenance costs.

Rural Impact Mitigation (RIM) Program Funding

The Nova Scotia Government is continuing funding of \$22 million for the Rural Impact Mitigation Program (RIM). RIM supports road maintenance improvements, including pavement and gravel patching, brush cutting, ditching, guardrail replacement, and shoreline protection.

Bridges

Nova Scotia has 4,100 bridges as part of the provincial road network. Bridges are an integral part of the road network; the Nova Scotia Government doubled the level of funding for the Bridge Program to \$60 million, and will continue that level of funding this year. Funding for the program is used to repair and replace existing structures for Nova Scotians. This enables a proactive approach to expand the rehabilitation and replacement of existing structures resulting in improved safety and reduced maintenance costs.

Major Projects – New, Ongoing, and Recently Completed

NEW

Planning and preliminary design work has started toward the six new major construction projects announced last year that will take place over the next seven years.

The projects include Highway 103 Argyle Interchange (Exit 32 and 32A), Highway 103 Exit 6 to Exit 7 twinning, Highway 103 Exit 7 to 8 twinning, Highway 104 Taylors Road to Paqtnekek twinning, Highway 107 Burnside to west of Loon Lake twinning. The department also committed to constructing the Cambridge Interchange and Connector. This will create a better and safer transportation option with a new Highway 101 interchange and connector roads. The interchange will be constructed with a traditional diamond ramp configuration including roundabouts at each of the new intersections. The work is expected to take three years to complete once construction starts.

Work will also commence this construction season on access improvements for non-twinned 100-series highways. That work involves improving intersections and ramps, as well as adding passing lanes, turning lanes, and roundabouts.

ONGOING

Construction will continue this season on Highway 101 Three Mile Plains to Falmouth, Highway 102 Aerotech Connector, Highway 103 Tantallon to Hubbards, Highway 103 Bridgewater Interchange, and the Highway 107 Sackville-Bedford-Burnside Connector, along with the multiple-year construction on Trunk 4 and Kings Road upgrades. Work to convert the Port Hastings rotary to a roundabout started in 2021 as part of the ongoing commitment to improve sections of un-twinned highways and will continue this season.

Construction will begin this year on the Tancook Ferry infrastructure development. The project involves upgrading the wharf and road infrastructure to support the new car ferry, including a new landing and staging areas in Blandford, which will replace the existing landing in Chester. The project will be constructed in multiple phases and is expected to be complete by 2026–27.

Construction continues this season for several projects including Highway 104/Route 334 at Aulds Cove and Highway 107 Exit 18 to 19 passing lanes. Other safety improvements, such as the rest stops on Highway 104 between Exits 8 and 10 near the Cobequid Pass toll plaza, also continue this season.

COMPLETED

Construction has been completed on the turning lanes at Highway 105 and Tobin Road and the intersection improvement at Route 215 and Trunk 14.

In the summer of 2023, the department opened the newly twinned Highway 104 Sutherlands River to Antigonish Project after more than three years in construction, providing safer driving for people travelling. The overall project covers about 38 kilometres of highway and includes the construction of two new interchanges, 24 new bridges, and environmental enhancements, such as wildlife corridors and fencing.

This project earned a gold award for the P3 Design and Construction for the Innovation and Excellence by the Canadian Council for Public-Private Partnerships 2023 National Awards.

Pavement Alternatives

Unlike many other provinces, the Province of Nova Scotia is responsible for maintaining the majority of public roads in the province (90 per cent). The cost per kilometre on average is \$500 thousand to rehabilitate our road infrastructure, and an average between \$500 thousand to \$750 thousand or more to upgrade a trunk highway, and \$5 million to \$7 million to twin a highway.

The department strives to use fiscally responsible alternatives to extend the life cycle of existing road infrastructure.

While severely damaged roads will continue to be addressed, a portion of our highway improvement budget will be set aside to help conserve paved roads before they become damaged and need costly repairs. This approach ensures funding is used more efficiently and effectively. It is more sustainable in the long term.

Surface treatment techniques can extend the life of asphalt, improve smoothness, reduce potholes, and decrease rutting and cracking. Roads stay smoother and safer at a much lower cost than by allowing them to deteriorate to the point of needing a full rehabilitation.

Storm Damage and Climate Change

This year Nova Scotia once again saw unprecedented severe weather events that caused extensive damage to infrastructure, including roads and bridges. The department continues ongoing repairs due to the storm damage, using more resilient infrastructure to better protect our roads and bridges from future storms. The department is working in an expedient manner to replace and repair damaged infrastructure over the next three to five years. The department continues to look at ways to better build and manage infrastructure to protect it from weather events.

Hwy 103 Rain Damage

Economic Impact

The road building industry in Nova Scotia is a large source of jobs and employs more than 7,500 people each year.

The total highway capital budget for 2024–25 is expected to exceed \$500 million. In addition to this, operational funding for highway maintenance will be made available as part of the 2024–25 budget.

Capital funding for highway construction and rehabilitation currently comes from three sources:

1. Provincial – Highway funding in Nova Scotia includes all revenues collected through provincial fuel taxes and registration of motor vehicles, as well as other funding provided by the provincial government.
Almost every dollar from Registry of Motor Vehicle (RMV) fees and the fuel tax goes back into provincial roads. Over the past two years, the province has invested an additional \$583 million beyond what was collected in RMV fees and fuel tax.
2. Federal – Federal funding to support highway improvement projects is provided by the New Build Canada Fund, the National Trade Corridors Fund, Investing in Canada Infrastructure Program, and the Disaster Mitigation and Adaptation Fund. The province continues to work with its federal partners to take advantage of opportunities for support where possible.
3. Municipal – Municipalities contribute on cost-shared projects in their areas.

How Capital Funding Is Invested

About \$295 million will be invested in the coming year for design work, road improvement, bridge rehabilitation, equipment, and ferries. Major construction spending for new highways and bridges will be confirmed in the 2024–25 provincial capital budget.

- Asphalt and Resurfacing \$161M
- Gravel Road Program \$55M
- Bridge Replacement/Rehabilitation \$60M
- Land Purchases \$7M
- Equipment, Machinery, Ferries \$7M
- Highway Design, Surveys \$5M

The following tables list major construction and asphalt paving projects on 100-series highways, trunks and routes, and major bridge replacements and rehabilitations for the next five years. Local roads, pavement preservation, and gravel road upgrades are also included for 2024–25.
