

Week 3 (January 13 to January 19, 2013)

Summary of Nova Scotia surveillance findings, for the period ending January 19, 2013:

- Twenty four influenza A positive lab results were reported this week.
- Other respiratory pathogen activity continues. Positive results were received for coronavirus, metapneumovirus, mycoplasma pneumoniae, rhinovirus and RSV.
- The ILI rate for Nova Scotia for this reporting period was 1.4. Eighty-two percent of ER sites reported ILI data this week.
- Three specimens were submitted through the sentinel swabbing program. Two from DHA 7 and 1 from DHA 8.
- Sentinel physician data was not received at time of report production.

Week 3 (January 13 to January 19, 2013)

APPENDIX: Definitions used in Influenza Surveillance, 2012-2013

1) ILI in the general population:

Acute onset of respiratory illness with fever and cough and with one or more of the following - sore throat, arthralgia, myalgia, or prostration which is likely due to influenza. In children under 5, gastrointestinal symptoms may also be present. In patients under 5 or 65 and older, fever may not be prominent.

2) Outbreaks of influenza / ILI by setting:

Schools and Daycares:

Greater than 10% absenteeism (or absenteeism that is higher (e.g. >5-10%) than expected level as determined by school or public health authority) which is likely due to ILI.

Hospitals and residential institutions:

Two or more cases of ILI within a seven-day period, including at least one laboratory confirmed case. Institutional outbreaks should be reported within 24 hours of identification. Residential institutions include but not limited to long-term care facilities (LTCF) and prisons.

Other Settings:

Two or more cases of ILI within a seven-day period, including at least one laboratory confirmed case; i.e. closed communities.

3) National FluWatch Definitions for Influenza Activity Levels:

Influenza activity levels are defined as:

1 = No activity: i.e. no laboratory-confirmed influenza detections in the reporting week, however,

sporadically occurring ILI* may be reported

2 = Sporadic: sporadically occurring ILI* and lab confirmed influenza detection(s) with no outbreaks

detected within the influenza surveillance region†

3 = Localized: (1) evidence of increased ILI* and

(2) lab confirmed influenza detection(s) together with

(3) outbreaks in schools, hospitals, residential institutions and/or other types of facilities

occurring in less than 50% of the influenza surveillance region†

4 = Widespread: (1) evidence of increased ILI* and

(2) lab confirmed influenza detection(s) together with

(3) outbreaks in schools, hospitals, residential institutions and/or other types of facilities

occurring in greater than or equal to 50% of the influenza surveillance region†

^{*} ILI data may be reported through sentinel physicians, emergency room visits or health line telephone calls.

[†] Sub-regions within the province or territory as defined by the provincial/territorial epidemiologist.

- 4) District Health Authorities (DHAs), Nova Scotia:
 - DHA 1 South Shore Health
 - DHA 2 South West Health
 - DHA 3 Annapolis Valley Health
 - DHA 4 Colchester East Hants Health Authority
 - DHA 5 Cumberland Health Authority
 - DHA 6 Pictou County Health Authority
 - DHA 7 Guysborough Antigonish Strait Health Authority
 - DHA 8 Cape Breton District Health Authority
 - DHA 9 Capital Health
