Rhinovirus	19	0	0.0	657	66	10.0	

Week 15 (April 6 to April 12, 2014)

APPENDIX: Definitions used in Influenza Surveillance, 2013-2014

1) ILI in the general population:

Acute onset of respiratory illness with fever and cough and with one or more of the following - sore throat, arthralgia, myalgia, or prostration which is likely due to influenza. In children under 5, gastrointestinal symptoms may also be present. In patients under 5 or 65 and older, fever may not be prominent.

2) Outbreaks of influenza / ILI by setting:

Schools and Daycares:

Greater than 10% absenteeism (or absenteeism that is higher (e.g. >5-10%) than expected level as determined by school or public health authority) which is likely due to ILI.

Hospitals and residential institutions:

Two or more cases of ILI within a seven-day period, including at least one laboratory confirmed case. Institutional outbreaks should be reported within 24 hours of identification. Residential institutions include but not limited to long-term care facilities (LTCF) and prisons.

Other Settings:

Two or more cases of ILI within a seven-day period, including at least one laboratory confirmed case; i.e. closed communities.

3) National FluWatch Definitions for Influenza Activity Levels:

Influenza activity levels are defined as:						
1 =	No activity:	i.e. no laboratory-confirmed influenza detections in the reporting week, however, sporadically occurring ILI* may be reported				
2 =	Sporadic:	sporadically occurring ILI* and lab confirmed influenza detection(s) with no outbreaks detected within the influenza surveillance region ⁺				
3 =	Localized:	 (1) evidence of increased ILI* and (2) lab confirmed influenza detection(s) together with (3) outbreaks in schools, hospitals, residential institutions and/or other types of facilities occurring in less than 50% of the influenza surveillance region⁺ 				
4 =	Widespread:	 (1) evidence of increased ILI* and (2) lab confirmed influenza detection(s) together with (3) outbreaks in schools, hospitals, residential institutions and/or other types of facilities occurring in greater than or equal to 50% of the influenza surveillance region⁺ 				

* ILI data may be reported through sentinel physicians, emergency room visits or health line telephone calls.
* Sub-regions within the province or territory as defined by the provincial/territorial epidemiologist.

Week 15 (April 6 to April 12, 2014)

- 4) District Health Authorities (DHAs), Nova Scotia:
 - DHA 1 South Shore Health
 - DHA 2 South West Health
 - DHA 3 Annapolis Valley Health
 - DHA 4 Colchester East Hants Health Authority
 - DHA 5 Cumberland Health Authority
 - DHA 6 Pictou County Health Authority
 - DHA 7 Guysborough Antigonish Strait Health Authority
 - DHA 8 Cape Breton District Health Authority
 - DHA 9 Capital Health
