

### Summary of Nova Scotia surveillance findings, for the 2 week period ending August 11, 2012:

- There was no influenza activity reported for weeks 31 & 32.
- Positive results were received for mycoplasma pneumonia and pertussis.
- The ILI rate for Nova Scotia for this reporting period was 0.4. DHA 2 did not report.

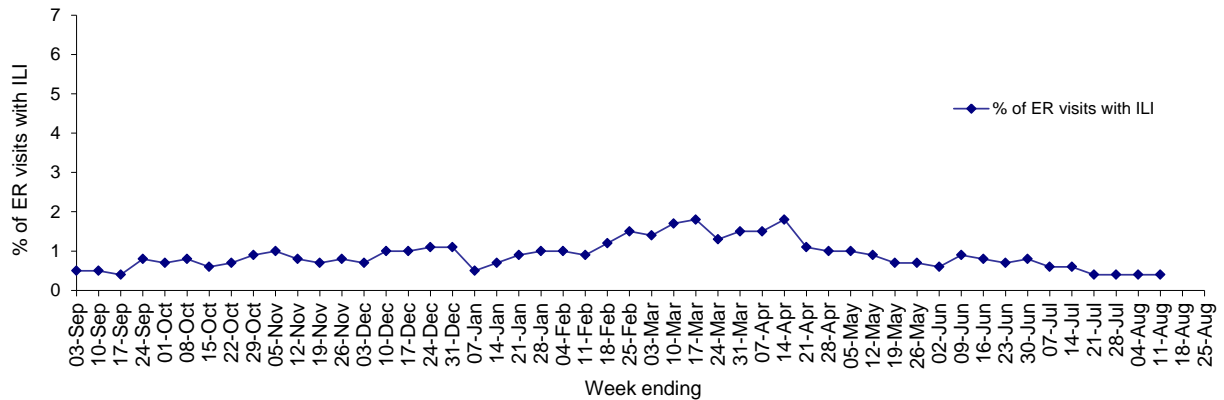

**Note:** While influenza surveillance continues to be monitored weekly, reporting will occur on a biweekly basis during the summer season.
