

## Summary of Nova Scotia surveillance findings, for the period ending January 24, 2015:

- There were 59 positive influenza cases received this week, 58 influenza A unsubtype and 1 influenza B. There have been 211 lab confirmed\* cases of influenza this season (85 influenza A H3, 111 influenza A (unsubtyped) and 15 influenza B).
- There have been 9 ICU admissions of laboratory confirmed influenza for the 2014-2015 influenza season.
- There have been 7 influenza deaths\*\* for the 2014-2015 influenza season.
- Positive results were received for adenovirus, coronavirus, parainfluenza, RSV, and rhinovirus.
- The ILI rate for Nova Scotia for this reporting period was 2.5.
- **ONE HUNDRED PERCENT** of emergency departments reported ILI data. This is the first time in the history of the program that all hospitals have reported in a given week.

\*Lab confirmed cases of influenza are only the 'tip of the iceberg', representing a fraction of individuals infected. Laboratory testing is reserved for patients admitted to hospital with respiratory infection. Because we do not routinely test community specimens, the number of laboratory confirmed cases is an underestimation of the true number of infections.

\*\*Deaths include individuals with a positive influenza test result. For some individuals with pre-existing conditions, influenza may not have been the major contributing cause of death or hospitalization.

**NOTE:** The 2014-2015 influenza season is defined using the Public Health Agency of Canada's influenza surveillance weeks. This year runs from August 24, 2014 (Week 35) to August 29, 2015 (week 34)

# RESPIRATORY WATCH

Week 3 (January 18 to January 24, 2015)

## APPENDIX: Definitions used in Influenza Surveillance, 2014-2015

1) ILI in the general population:

Acute onset of respiratory illness with fever and cough and with one or more of the following - sore throat, arthralgia, myalgia, or prostration which is likely due to influenza. In children under 5, gastrointestinal symptoms may also be present. In patients under 5 or 65 and older, fever may not be prominent.

2) Outbreaks of influenza / ILI by setting:

Schools and Daycares:

Greater than 10% absenteeism (or absenteeism that is higher (e.g. >5-10%) than expected level as determined by school or public health authority) which is likely due to ILI.

Hospitals and residential institutions:

Two or more cases of ILI within a seven-day period, including at least one laboratory confirmed case. Institutional outbreaks should be reported within 24 hours of identification. Residential institutions include but not limited to long-term care facilities (LTCF) and prisons.

Other Settings:

Two or more cases of ILI within a seven-day period, including at least one laboratory confirmed case; i.e. closed communities.

3) National FluWatch Definitions for Influenza Activity Levels:

**Influenza activity levels are defined as:**

- |                         |  |
|-------------------------|--|
| <b>1 = No activity:</b> | i.e. no laboratory-confirmed influenza detections in the reporting week, however, sporadically occurring ILI* may be reported  |
| <b>2 = Sporadic:</b>    | sporadically occurring ILI* and lab confirmed influenza detection(s) with <b>no outbreaks</b> detected within the influenza surveillance region†   |
| <b>3 = Localized:</b>   | (1) evidence of increased ILI* and<br>(2) lab confirmed influenza detection(s) together with<br>(3) outbreaks in schools, hospitals, residential institutions and/or other types of facilities occurring in <b>less than 50% of the influenza surveillance region</b> †                |
| <b>4 = Widespread:</b>  | (1) evidence of increased ILI* and<br>(2) lab confirmed influenza detection(s) together with<br>(3) outbreaks in schools, hospitals, residential institutions and/or other types of facilities occurring in <b>greater than or equal to 50% of the influenza surveillance region</b> † |

\* ILI data may be reported through sentinel physicians, emergency room visits or health line telephone calls.

† Sub-regions within the province or territory as defined by the provincial/territorial epidemiologist.
