Gain a healthy amount of weight

Gaining a healthy amount of weight gives you the best chance of having a healthy baby.

When you gain a healthy amount of weight, only 5 to 8 pounds of this weight gain is fat. Your body stores this fat to give you the extra energy you will need while pregnant and breastfeeding. Breastfeeding can help you to lose this extra weight.

If you eat well and stay active, you will have no problem gaining a healthy amount of weight. Let your appetite guide the amount of food that you need. Please remember, pregnancy is not a time for dieting. Dieting can harm you and your baby.

A healthy weight gain for most mothers is 25 to 35 pounds. Your health care provider may recommend a different weight gain if you
• were overweight or underweight before you became pregnant
• are younger than 17
• are having twins or triplets

Breasts — 2 to 3 pounds
Blood — 4 pounds
Uterus — 2 to 3 pounds
Placenta and amniotic fluid — 4 to 6 pounds
Extra fluids — 2 to 3 pounds
Energy stored as fat — 5 to 8 pounds
Baby — 6 to 8 pounds

Limit or avoid artificial sweeteners

Limit the artificial sweetener aspartame during pregnancy. While studies suggest it is not a health risk, it is found in foods and drinks that may not offer nourishment for you or your baby. Nutrient-dense foods are a better choice.

Avoid alcohol

Drinking alcohol is not recommended at any time during pregnancy. There are no known safe amounts of alcohol. Alcohol can harm your baby's brain and nervous system.

Limit caffeine

Caffeine is in many foods and drinks including coffee, tea, cokes, and chocolate. During pregnancy, limit caffeine to no more than 300 mg a day to keep your baby safe. This means no more than 2 cups of instant coffee or 2 cups of brewed coffee each day. These beverages often replace healthier options in the diet. Limit these drinks so you have plenty of room for healthier choices each day.

What can I drink instead?

It is best to drink milk, fortified soymilk, fruit and vegetable juices, and water.

Some herbal teas are safe to drink during pregnancy and others are not. Speak to your health care provider.

Limit or avoid some foods and drinks

Watch out for some kinds of fish

Canada’s Food Guide recommends that you eat at least two Food Guide Servings of fish each week. The nutrients in fish are particularly good for children, pregnant women, and women who may become pregnant. However, some types of fish can have high levels of mercury, which can harm your growing baby.

If you are pregnant, may become pregnant, or are breastfeeding, have no more than 2 Food Guide Servings each month of fresh or frozen tuna, swordfish, marlin, orange roughy, escolar, or shark.

Have no more than 4 Food Guide Servings each week of canned albacore tuna.

You do not need to limit the amount of canned light tuna you eat. Canned light tuna contains less mercury than albacore tuna.

You can find the latest information on mercury in fish at hc-sc.gc.ca/fn-an/securit/chem-chim/environ/mercur/index-eng.php

Handle food safely

Take extra care to handle food safely when you are pregnant. Illnesses from poor food handling can harm you and your unborn baby.

Unpasteurized milk, soft cheeses, and jellies may cause listeria infection, a food-borne illness. Avoid these during pregnancy. Deli meats carry a lower risk of listeria, but you may choose to avoid them during pregnancy. Avoid raw hot dogs—make sure that they are fully cooked. Avoid prepared refrigerated foods, such as smoked fish, unless they are re-cooked to steaming hot to kill bacteria.

Food safety tips
• Wash your hands before you prepare or eat foods.
• Wash all surfaces where food is prepared, especially after cutting raw meats and fish.
• Eat fully cooked meat and fish.
• Wash raw fruits and vegetables, even those with skin or peel.

Healthy Eating
During Pregnancy
Eating Well with Canada’s Food Guide

### Multivitamins
- All women of childbearing age and those who are pregnant or breastfeeding need a multivitamin containing 400 mcg (0.4 mg) of folic acid each day. During pregnancy, your multivitamin should also contain 16–20 mg of iron.

- Some women may need even more iron or folic acid. Talk with your health care provider to find the multivitamin that is right for you or if you have any questions about healthy eating.

### Make Each Food Guide Serving Count!
- Eat at least one dark green and one orange vegetable each day.
- Choose vegetables and fruit prepared with little or no added fat, sugar, or salt.
- Choose vegetables and fruit prepared with little or no added fat, sugar, or salt.
- Vegetables and fruits are a good source of fibre.
- Eggs and legumes are a good source of protein.
- Milk and milk alternatives are a good source of calcium and vitamin D.
- Some red meat and alternatives are a good source of iron.
- Whole grains, leafy green vegetables, and nuts and seeds are good sources of iron.
- Some women may need even more iron or folic acid.

### Plan to breastfeed
Breastfeeding is the normal way to feed a baby. It gives your baby the best start to a lifetime of healthy eating. Breast milk is all your baby needs for the first 6 months of life. Breastfeeding can continue to 2 years and beyond.

Breastfeeding protects babies from infections, asthma, and some chronic diseases. It can also help you lose weight and protect you from breast cancer. For breastfeeding support, contact La Leche League Canada at 1-800-563-2400 or your local Public Health Services office.

### Get the Nutrients and Calories You Need to Build a Healthy Baby

- Pregnancy is a good time to enjoy eating healthy foods. The best way to get all the vitamins and minerals you need is to eat a variety of foods from each food group. Take extra care to get the nutrients and calories you need to build a healthy baby.
- **Calcium and Vitamin D**
  - Calcium and vitamin D keep your bones strong and build strong bones and teeth for your baby. Fortified milk and alternatives are a good source of calcium and vitamin D.
- **Iron**
  - Iron helps build healthy blood for you and your baby. Meat, whole grains, leafy green vegetables, and fruits and seeds are good sources of iron.
- **Folate/Folic Acid**
  - Folate/folic acid helps build healthy blood and tissues for you and your baby. It reduces the risk of birth defects that affect the baby’s brain and spine. Whole grains and leafy green vegetables are a good source of this vitamin.
- **Extra Calories**
  - Women need extra calories during the second and third trimesters of pregnancy. These extra calories ensure that the mother gains enough weight to support the baby’s growth and development. Pregnant women need about 350 extra calories each day during the 2nd trimester and 450 extra calories each day during the 3rd trimester.
  - The best way to get these extra calories is to eat a little more food every day from the food groups of your choice. The extra food you eat should total about 2 Food Guide Servings.
  - **Fruits and Vegetables**
    - Include a variety—3 to 4 cups—of fruits and vegetables each day.
    - Eat vegetables and fruit prepared with little or no added fat, sugar, or salt.
  - **Dairy**
    - Choose milk and milk alternatives that are low in fat, sugar, or salt.
    - Drink 1% or close to 0% milk.
  - **Grains**
    - Choose grains that are lower in fat, sugar, or salt.
    - Make at least half of your grain products whole grain each day.
  - **Protein Foods**
    - Choose lean meat and alternatives—like beans, lentils, and tofu—with little or no added fat or salt.
  - **Fats, Oils, and Salts**
    - Use vegetable oils such as canola, olive, and soybean.
    - Choose soft margarines that are low in saturated and trans fats.
    - Limit butter, hard margarine, lard, and shortening.

### Every Day
Eat foods from all four food groups and take extra care to get the nutrients and calories you need to build a healthy baby.

- **Calcium and Vitamin D**
  - Calcium and vitamin D keep your bones strong and build strong bones and teeth for your baby. Fortified milk and alternatives are a good source of calcium and vitamin D.
- **Iron**
  - Iron helps build healthy blood for you and your baby. Meat, whole grains, leafy green vegetables, and fruits and seeds are good sources of iron.
- **Folate/Folic Acid**
  - Folate/folic acid helps build healthy blood and tissues for you and your baby. It reduces the risk of birth defects that affect the baby’s brain and spine. Whole grains and leafy green vegetables are a good source of this vitamin.

- **Fruits and Vegetables**
  - Include a variety—3 to 4 cups—of fruits and vegetables each day.
  - Eat vegetables and fruit prepared with little or no added fat, sugar, or salt.
- **Dairy**
  - Choose milk and milk alternatives that are low in fat, sugar, or salt.
  - Drink 1% or close to 0% milk.
- **Grains**
  - Choose grains that are lower in fat, sugar, or salt.
  - Make at least half of your grain products whole grain each day.
- **Protein Foods**
  - Choose lean meat and alternatives—like beans, lentils, and tofu—with little or no added fat or salt.
  - Select lean meat and alternatives and prepare them with little or no added fat or salt.

### Oils and Fats
- Include a small amount—30 to 45 mL (2 to 3 tablespoons)—of unsaturated fat each day.
- This includes oil used for cooking, salad dressings, margarine, and mayonnaise.
- Use vegetable oils such as canola, olive, and soybean.
- Choose soft margarines that are low in saturated and trans fats.
- Limit butter, hard margarine, and shortening.

- **Fruits and Vegetables**
  - Include a variety—3 to 4 cups—of fruits and vegetables each day.
  - Eat vegetables and fruit prepared with little or no added fat, sugar, or salt.
- **Dairy**
  - Choose milk and milk alternatives that are low in fat, sugar, or salt.
  - Drink 1% or close to 0% milk.
- **Grains**
  - Choose grains that are lower in fat, sugar, or salt.
  - Make at least half of your grain products whole grain each day.
- **Protein Foods**
  - Choose lean meat and alternatives—like beans, lentils, and tofu—with little or no added fat or salt.
  - Select lean meat and alternatives and prepare them with little or no added fat or salt.

### EVERY DAY
Eat foods from all four food groups and take a multivitamin that contains 400 mcg (0.4 mg) of folic acid and 16–20 mg of iron. Check with your health care provider to find out what multivitamin is right for you.

**Plan to breastfeed**

Breastfeeding is the normal way to feed a baby. It gives your baby the best start to a lifetime of healthy eating. Breast milk is all your baby needs for the first 6 months of life. Breastfeeding can continue to 2 years and beyond.

Breastfeeding protects babies from infections, asthma, and some chronic diseases. It can also help you lose weight and protect you from breast cancer. For breastfeeding support, contact La Leche League Canada at 902.481.5800 or your local Public Health Services office.
Gain a healthy amount of weight

Gaining a healthy amount of weight gives you the best chance of having a healthy baby.

When you gain a healthy amount of weight, only 5 to 8 pounds of this weight gain is fat. Your body stores this fat to give you the extra energy you will need while pregnant and breastfeeding. Breastfeeding can help you to lose this extra weight.

If you eat well and stay active, you will have no problem gaining a healthy amount of weight. Let your appetite guide the amount of food that you need. Please remember, pregnancy is not a time for dieting. Dieting can harm you and your baby.

Limit or avoid artificial sweeteners

Limit or avoid artificial sweeteners during pregnancy. While studies suggest it is not a health risk, it is found in foods and drinks that may not offer nourishment for you or your baby. Nutrient-dense foods are a better choice.

Avoid the artificial sweeteners saccharin and cyclamates during pregnancy. These may harm your baby.

Avoid alcohol

Drinking alcohol is not recommended at any time during pregnancy. There are no known safe amounts of alcohol. Alcohol can harm your baby’s brain and nervous system.

Limit caffeine

Caffeine is in many foods and drinks including coffee, tea, cola, and chocolate. During pregnancy, limit caffeine to no more than 300 mg a day to keep your baby safe. This means no more than 2 cups of instant coffee or 2 cups of brewed coffee each day. These beverages often replace healthier options in the diet. Limit these drinks so you have plenty of room for healthier choices each day.

Limit or Avoid Some Foods and Drinks

Food safety tips

• Wash your hands before you prepare or eat foods.
• Wash all surfaces where food is prepared, especially after cutting raw meats and fish.
• Eat fully cooked meat and fish.
• Wash raw fruits and vegetables, even those with skin or peel.

Watch out for some kinds of fish

Canada’s Food Guide recommends that you eat at least two Food Guide Servings of fish each week. The nutrients in fish are particularly good for children, pregnant women, and women who may become pregnant. However, some types of fish can have high levels of mercury, which can harm your growing baby.

If you are pregnant, may become pregnant, or are breastfeeding, have no more than 2 Food Guide Servings each month of fresh or frozen tuna, swordfish, marlin, orange roughy, escolar, or shark.

Have no more than 4 Food Guide Servings each week of canned albacore tuna.

You do not need to limit the amount of canned light tuna you eat. Canned light tuna contains less mercury than albacore tuna. You can find the latest information on mercury in fish at hc-sc.gc.ca/fn-an/securit/chem-chim/environ/mercur/index-eng.php

Handle food safely

Take extra care to handle food safely when you are pregnant. Illnesses from poor food handling can harm you and your unborn baby.

Unpasteurized milk, soft cheeses, and jellies may cause Listeria infection, a food-borne illness. Avoid these during pregnancy. Deli meats carry a lower risk of Listeria, but you may choose to avoid them during pregnancy. Avoid raw hot dogs—make sure that they are fully cooked. Avoid prepared refrigerated foods, such as smoked fish, unless they are re-cooked to steaming hot to kill bacteria.

"Healthy Eating During Pregnancy"
Gain a healthy amount of weight

Gaining a healthy amount of weight gives you the best chance of having a healthy baby.

A healthy weight gain for most mothers is 25 to 35 pounds. Your health care provider may recommend a different weight gain if you:

• were overweight or underweight before you became pregnant
• are younger than 17
• are having twins or triplets

Breasts — 2 to 3 pounds
Blood — 4 pounds
Uterus — 2 to 3 pounds
Placenta and amniotic fluid — 4 to 6 pounds
Extra fluids — 2 to 3 pounds
Energy stored as fat — 5 to 8 pounds
Baby — 6 to 8 pounds

Limit or avoid artificial sweeteners

Limit or avoid artificial sweeteners during pregnancy. While studies suggest it is not a health risk, it is found in foods and drinks that may not offer nourishment for you or your baby. Nutrient-dense foods are a better choice.

Avoid artificial sweeteners saccharin and cyclamates during pregnancy. These may harm your baby.

Healthy Eating During Pregnancy

Gain a healthy amount of weight
Get the Nutrients and Calories You Need to Build a Healthy Baby

Pregnancy is a good time to enjoy eating healthy foods. The best way to get all the vitamins and minerals you need is to eat a variety of foods from each food guide group. Take extra care to get the nutrients and calories you need to build a healthy baby.

- **Calcium and Vitamin D**
  
  Calcium and vitamin D keep your bones strong and build strong bones and teeth for your baby. Fortified milk and alternatives are a good source of calcium and vitamin D.

- **Iron**
  
  Iron helps build healthy blood for you and your baby. Meat, whole grains, leafy green vegetables, and fruits and seeds are good sources of iron.

During pregnancy your body needs extra iron. Your multivitamin should contain 16–20 mg of iron. During pregnancy, your multivitamin should also contain 400 mcg (0.4 mg) of folic acid every day. During pregnancy, your multivitamin should also contain 16–20 mg of iron.

Some women may need even more iron or folic acid. Talk with your health care provider to find the multivitamin that is right for you or if you have any questions about healthy eating.

Make Each Food Guide Serving Count!

- Eat at least one dark green and one orange vegetable each day.
- Choose vegetables and fruit prepared with little or no added fat, sugar, or salt.
- Have fruits and vegetables more than juice.
- Make at least half of your grains products whole grain each day.
- Choose grain products that are lower in fat, sugar, or salt.
- Drink skim, 1%, or 2% milk.
- Have 950 mL (3 2 cups) of milk every day to be sure you get enough D.
- Select lower fat milk alternatives.
- Have meat alternatives—like beans, lentils, and tofu—often.

Select lean meat and alternatives and prepare them with little or no added fat or salt.

**Multivitamin Supplements**

- All women of childbearing age and those who are pregnant or breastfeeding need a multivitamin containing 400 mcg (0.4 mg) of folic acid every day. During pregnancy, your multivitamin should also contain 16–20 mg of iron.

### Plan to breastfeed

Breastfeeding is the normal way to feed a baby. It gives your baby the best start to a lifetime of healthy eating. Breast milk is all your baby needs for the first 6 months of life. Breastfeeding can continue to 2 years and beyond.

Breastfeeding protects babies from infections, asthma, and some chronic diseases. It can also help you lose weight and protect you from breast cancer. For breastfeeding support, contact La Leche League Canada at [lclc.ca](http://lclc.ca) or your local Public Health Services office.
