Nova Scotia Formulary Updates

New Exception Status Products

- Amvuttra (vutrisiran)
- Orladeyo (berotralstat hydrochloride)

Criteria Update

- Verzenio (abemaciclib)

New Benefits

Nova Scotia Formulary Updates

New Exception Status Products

The following new products have been listed with the following criteria, effective **February 1, 2025**.

PRODUCT	STRENGTH	DIN	PRESCRIBER	BENEFIT STATUS	MFR
Amvuttra (vutrisiran)	25mg/0.5ml Prefilled Syringe	02542420	DNP	E (SF)	ALN
Criteria	<ul style="list-style-type: none">• For the treatment of polyneuropathy in adult patients with hereditary transthyretin-mediated amyloidosis (hATTR) who meet all of the following criteria:<ul style="list-style-type: none">○ Confirmed genetic diagnosis of hATTR.○ Symptomatic with early-stage neuropathy¹.○ Does not have New York Heart Association class III or IV heart failure.○ Has not previously undergone a liver transplant.				

Discontinuation Criteria:

- The patient is permanently bedridden and dependent on assistance for basic activities of daily living.

OR

- The patient is receiving end-of-life care.

Clinical Note:

1. Symptomatic early-stage neuropathy is defined as polyneuropathy disability stage I to IIIB or familial amyloidotic polyneuropathy stage I or II.

Claim Notes:

- The patient must be under the care of a physician with experience in the diagnosis and management of hATTR.

Criteria	<ul style="list-style-type: none"> Combination therapy with other interfering ribonucleic acid drugs or transthyretin stabilizers used to treat hATTR will not be reimbursed. Initial Approval: 9 months. Renewal Approval: 12 months. Confirmation of continued response is required. For claim adjudication contact Nova Scotia Pharmacare Programs. 				

PRODUCT	STRENGTH	DIN	PRESCRIBER	BENEFIT STATUS	MFR
Orladeyo (berotralstat hydrochloride)	150mg Cap	02527693	DNP	E (SF)	BCP
Criteria	<ul style="list-style-type: none"> For the routine prevention of attacks of type I or II hereditary angioedema (HAE) in patients 12 years of age and older who have experienced at least three HAE attacks within any four-week period and required the use of an acute injectable treatment. <p>Discontinuation Criteria:</p> <ul style="list-style-type: none"> No reduction in the number of HAE attacks for which acute injectable treatment was received during the first three months of treatment with berotralstat compared to the number of attacks observed before initiating treatment with berotralstat; <p>OR</p> <ul style="list-style-type: none"> Increase in the number of HAE attacks for which acute injectable treatment was received compared to the number of attacks before initiating treatment with berotralstat. <p>Clinical Note:</p> <ul style="list-style-type: none"> The pre-treatment attack rate must be provided. For those patients who are already receiving long-term prophylactic treatment for HAE and intend to transition to berotralstat, pre-treatment attack rate prior to long-term prophylactic treatment must be provided. <p>Claim Notes:</p> <ul style="list-style-type: none"> Must be prescribed by a physician experienced in the diagnosis and treatment of HAE. Combination use of Orladeyo (berotralstat) with other long-term prophylactic treatment of HAE (e.g., a C1 esterase inhibitor or lanadelumab) will not be funded. Initial approval period: 3 months. Renewal approval period: 6 months. 				

Criteria Update

The following criteria has been updated and will replace existing criteria effective **February 1, 2025**.

PRODUCT	STRENGTH	DIN	PRESCRIBER	BENEFIT STATUS	MFR
Verzenio (abemaciclib)	50mg Tab	02487098	DNP	E (SFC)	LIL
	100mg Tab	02487101	DNP	E (SFC)	LIL
	150mg Tab	02487128	DNP	E (SFC)	LIL
Criteria	<ul style="list-style-type: none"> In combination with endocrine therapy (ET) for the adjuvant treatment of adult patients with hormone receptor (HR)-positive, human epidermal growth factor receptor 2 (HER2)-negative, node-positive early breast cancer at high risk of disease recurrence based on clinicopathological features. <p>Clinical Notes:</p> <ul style="list-style-type: none"> Patient should have a good performance status. Treatment should continue until disease progression, unacceptable toxicity, or completion of 2 years of adjuvant therapy. ET may be continued after abemaciclib is completed. Patients are not eligible if they have inflammatory breast cancer, or prior treatment with a CDK4/6 inhibitor. Retreatment with a CDK4/6 inhibitor may be reasonable in the metastatic setting if disease recurrence occurs greater than or equal to 6 months after completion of adjuvant abemaciclib. Sequencing with olaparib is not funded. Only one of abemaciclib or olaparib will be funded in the adjuvant setting when eligible. 				

New Benefits

Effective **February 1, 2025**, the following products will be added as benefits in the Nova Scotia Formulary. The benefit status within the Pharmacare Programs is indicated and existing criteria applies.

Nova Scotia Formulary Updates

New Exception Status Products

- Koselugo (selumetinib)
- Remsima SC (infliximab)
- Welireg (belzutifan)

Criteria Update

- Kerendia (finerenone)

Coverage Period Updates for Biologics and Janus kinase (JAK) Inhibitors

Nova Scotia Formulary Updates

New Exception Status Products

The following new products have been listed with the following criteria, effective **March 1, 2025**.

PRODUCT	STRENGTH	DIN	PRESCRIBER	BENEFIT STATUS	MFR
Koselugo (selumetinib)	10mg Cap	02530139	DNP	E (F)	ALX
	25mg Cap	02530147	DNP	E (F)	ALX

Criteria

- For pediatric patients aged 2 to 18 years with neurofibromatosis type 1 (NF1) with symptomatic, inoperable plexiform neurofibromas (PNs).

Initial renewal:

- The physician must document the beneficial clinical effect when requesting continuation of reimbursement.
- Patients on therapy should be monitored for response (e.g., a reduction in pain, improved function, reduction in tumour volume, disease stabilization) using clinical judgment and/or standard imaging.

Second and subsequent renewal criteria (at 18 months after initiation and thereafter):

- The patient does not have disease worsening or progression (e.g., worsening of motor function or pain).

Claim Notes:

- The patient must be under the care of either a neurooncologist or a pediatrician with expertise in neurooncology.
- Initial approval: 18 months
- Renewal Approval: 12 months
- Claims that exceed the maximum claim amount of \$9,999.99 must be divided and submitted as separate transactions using the DIN first and then the following PINs:
 - Koselugo 10mg Capsule: 00900042
 - Koselugo 20mg Capsule: 00900043

Change in Benefit Status

New Benefits

Nova Scotia Formulary Updates

Infliximab IV (Inflectra) Changes and New Infliximab IV Products

As communicated in a previous Bulletin, a distribution agreement between Pfizer Canada ULC and Celltrion Inc. for the infliximab biosimilar, Inflectra, ended on March 31, 2025.

Pfizer Canada ULC has launched a new biosimilar infliximab IV under the trade name Ixifi and Drug Identification Number (DIN) 02523191.

Celltrion is marketing biosimilar infliximab IV under the existing DIN 02419475 with the trade name Remdantral.

Inflectra will continue to be available for a 6-month transition period between April 1, 2025 and September 30, 2025, after which Inflectra will no longer be available for sale in Canada.

Between April 1 and September 30, the Pfizer labelled Inflectra and Celltrion labelled Remdantral, will be available and share the same Drug Identification Number (DIN 02419475). As a result, effective April 1, 2025, Inflectra claims will require the use of the PIN 66128531.

After April 1, 2025, no further requests for Inflectra will be considered. Coverage will be provided for other funded infliximab biosimilars.

Infliximab IV (Inflectra) Changes and New Infliximab IV Products Continued...

The following infliximab biosimilar products have been listed with the following criteria, effective April 1, 2025:

PRODUCT	STRENGTH	DIN	PRESCRIBER	BENEFIT STATUS	MFR
Ixifi (infliximab)	100mg/mL Vial	02523191	DNP	E (SF)	PFI
Remdantry (infliximab)	100mg/mL Vial	02419475	DNP	E (SF)	CLT
Criteria	<p>Ankylosing Spondylitis</p> <p>For the treatment of patients with moderate to severe ankylosing spondylitis (Bath AS Disease Activity Index (BASDAI) score ≥ 4 on 10 point scale) who:</p> <ul style="list-style-type: none"> • Have axial symptoms¹ and who have failed to respond to the sequential use of at least 2 NSAIDs at the optimum dose for a minimum period of 2 weeks each, or in whom NSAIDs are contraindicated; OR • Have peripheral symptoms and who have failed to respond to, or have contraindications to, the sequential use of at least 2 NSAIDs at the optimum dose for a minimum period of 2 weeks each and have had an inadequate response to an optimal dose or maximal tolerated dose of a DMARD. • Must be prescribed by a rheumatologist or prescriber with a specialty in rheumatology. • Requests for renewal must include information showing the beneficial effects of the treatment, specifically: <ul style="list-style-type: none"> ○ A decrease of at least 2 points on the BASDAI scale, compared with the pre-treatment score; OR ○ Patient and expert opinion of an adequate clinical response as indicated by a significant functional improvement (measured by outcomes such as HAQ or "ability to return to work") <p>Claim Notes:</p> <ul style="list-style-type: none"> • Maximum dose 5mg/kg at 0,2, and 6 weeks then every 6-8 weeks thereafter • Concurrent use of biologics not approved • Initial period: 6 months • Renewal approval: Long term <p>¹Patients with recurrent uveitis (2 or more episodes within 12 months) as a complication of axial disease, do not require a trial of 2 NSAIDs.</p> <p>Crohn's Disease</p> <p>For the treatment of patients with moderately to severely active Crohn's disease who are refractory to, intolerant or have contraindications to corticosteroids and other immunosuppressive therapy.</p> <p>Clinical Notes:</p> <ul style="list-style-type: none"> • Refractory is defined as lack of effect at the recommended doses and for duration of treatments specified above.

Nova Scotia Formulary Updates

New Exception Status Product

The following new product has been listed with the following criteria, effective **May 1, 2025**.

PRODUCT	STRENGTH	DIN	PRESCRIBER	BENEFIT STATUS	MFR
Osnuvo (teriparatide)	250mcg/mL Prefilled Ctg Inj	02495589	DNP	E (SF)	AVI
Criteria	<ul style="list-style-type: none">• For the treatment of severe osteoporosis in patients who:<ul style="list-style-type: none">○ Have experienced a recent severe vertebral fracture OR○ Had more than one vertebral fracture and a T-score of -2.5 or less at the total hip or lumbar spine, or femoral neck OR○ Had failure, intolerance, or contraindication to bisphosphonates (oral and injectable) and denosumab				

Clinical Notes:

- Recent fracture is defined as a fracture occurring within the past 2 years
- Severe vertebral fracture is defined as a vertebral body height loss of > 40%

Claim Notes:

- Requests are to be received from a specialist with expertise in anabolic therapy
- Lifetime exposure to be 24 months.

Criteria Updates

The following new indications have been added to existing criteria effective **May 1, 2025**.

PRODUCT	STRENGTH	DIN	PRESCRIBER	BENEFIT STATUS	MFR
Bimzelx (bimekizumab)	160mg/mL Prefilled Syringe 160mg/mL Autoinjector	02525267 02525275	DNP DNP	E (SF) E (SF)	UCB UCB
Criteria	<p>Psoriatic Arthritis</p> <ul style="list-style-type: none"> For the treatment of patients with predominantly axial psoriatic arthritis who are refractory, intolerant or have contraindications to the sequential use of at least two NSAIDs at maximal tolerated dose for a minimum of two weeks each. For the treatment of patients with predominantly peripheral psoriatic arthritis who are refractory, intolerant or have contraindications to: <ul style="list-style-type: none"> The sequential use of at least two NSAIDs at maximal tolerated dose for a minimum of two weeks each; Methotrexate (oral or parenteral) at a dose of ≥ 20mg weekly (≥ 15mg if patient is ≥ 65 years of age) for a minimum of 8 weeks; AND Leflunomide for a minimum of 10 weeks or sulfasalazine for a minimum of 3 months. <p>Clinical Notes:</p> <ul style="list-style-type: none"> For patients who do not demonstrate a clinical response to oral methotrexate, or who experience gastrointestinal intolerance, a trial of parenteral methotrexate must be considered. Refractory is defined as lack of effect at the recommended doses and for duration of treatments specified above. Intolerant is defined as demonstrating serious adverse effects to treatments. The nature of intolerance(s) must be clearly documented. <p>Claim Notes:</p> <ul style="list-style-type: none"> Must be prescribed by a rheumatologist. Combined use of more than one biologic DMARD will not be reimbursed Approvals will be for 160mg by subcutaneous injection every 4 weeks. Initial Approval: 6 months. Renewal Approval: 1 year. <p>Ankylosing Spondylitis</p> <ul style="list-style-type: none"> For the treatment of patients with moderate to severe ankylosing spondylitis (Bath AS Disease Activity Index (BASDAI) score ≥ 4 on 10 point scale) who: <ul style="list-style-type: none"> Have axial symptoms and who have failed to respond to the sequential use of at least 2 NSAIDs at the optimum dose for a minimum period of 2 weeks each, or in whom NSAIDs are contraindicated; OR Have peripheral symptoms and who have failed to respond to, or have contraindications to, the sequential use of at least 2 NSAIDs at the optimum dose for a minimum period of 2 weeks each and have had an inadequate response to an optimal dose or maximal tolerated dose of a DMARD.

Change in Benefit Status

Nova Scotia Formulary Updates

New Exception Status Products

The following new products have been listed with the following criteria, effective **July 1, 2025**.

PRODUCT	STRENGTH	DIN	BENEFIT STATUS	MFR
Vascepa (icosapent ethyl)	1g Cap	02495244	E (SF)	HLS

Criteria

To reduce the risk of cardiovascular events (cardiovascular death, non-fatal myocardial infarction, non-fatal stroke, coronary revascularization, or hospitalization for unstable angina) in statin-treated patients with elevated triglycerides, who meet all of the following criteria:

- Aged 45 years and older;
- Established cardiovascular disease (secondary prevention);
- Concomitantly treated with a statin;
- Have a fasting triglyceride of 1.7 mmol/L or greater and lower than 5.6 mmol/L at baseline, measured within the preceding three months before starting treatment with icosapent ethyl;
- Have a low-density lipoprotein cholesterol greater than 1.0 mmol/L and lower than 2.6 mmol/L at baseline and be receiving a maximally tolerated statin dose, targeted to achieve a low-density lipoprotein cholesterol lower than 2 mmol/L, for a minimum of four weeks.

Renewal Criteria:

- Patient continues to be treated with a maximally tolerated statin dose.

Claims Notes:

- Approvals will be for a maximum of 4 g daily
- Approvals: 12 months.

Velsipity (etrasimod)	2mg Tab	02544903	E (SF)	PFI
Criteria	<ul style="list-style-type: none"> For the treatment of adult patients with moderately to severely active ulcerative colitis who have a partial Mayo score > 4, and a rectal bleeding subscore ≥ 2 and are: <ul style="list-style-type: none"> refractory or intolerant to conventional therapy (i.e. 5-ASA for a minimum of 4 weeks, and prednisone ≥ 40mg daily for two weeks or IV equivalent for one week); or corticosteroid dependent (i.e. cannot be tapered from corticosteroids without disease recurrence; or have relapsed within three months of stopping corticosteroids; or require two or more courses of corticosteroids within one year.) Renewal requests must include information demonstrating the beneficial effects of the treatment, specifically: <ul style="list-style-type: none"> a decrease in the partial Mayo score ≥ 2 from baseline, and a decrease in the rectal bleeding subscore ≥ 1. 			

Clinical Notes:

- Refractory is defined as lack of effect at the recommended doses and for duration of treatments specified above.
- Intolerant is defined as demonstrating serious adverse effects or contraindications to treatments as defined in product monographs. The nature of intolerance(s) must be clearly documented.
- Patients with severe disease do not require a trial of 5-ASA.

Claim Notes:

- Must be prescribed by a gastroenterologist or physician with a specialty in gastroenterology.
- Combined use of etrasimod with a biologic DMARD or JAK inhibitor will not be reimbursed.
- Approvals will be for a maximum dose of 2 mg daily
- Initial Approval: 6 months
- Renewal Approval: 1 year

Nova Scotia Formulary Updates

New Exception Status Products

- Uplizna (inebilizumab)
- Lysodren (mitotane)

Criteria Update

- Alecensaro (alectinib)

New Benefits

Nova Scotia Formulary Updates

New Exception Status Products

The following new products have been listed with the following criteria, effective August 1, 2025.

PRODUCT	STRENGTH	DIN	BENEFIT STATUS	MFR
Uplizna (inebilizumab)	10mg/mL Vial	02543931	E (SF)	AGA

Criteria **Initiation:**

- For the treatment of adult patients with neuromyelitis optica spectrum disorder (NMOSD) who meet all of the following criteria:
 - Anti-aquaporin-4 immunoglobulin G (AQP4-IgG) seropositive
 - Have had \geq 1 attack in the prior 12 months or \geq 2 attacks in the prior 2 years
 - Patients must have an EDSS score of 8 points or less

Renewal:

- The physician should measure and provide EDSS scores every 12 months after the initial authorization to determine if the continuation of inebilizumab reimbursement should occur.

Discontinuation:

- Reimbursement of inebilizumab treatment should be discontinued if the patient's EDSS score is greater than 8 points.

Claim Notes:

- Initial and renewal approval: 12 months
- The prescribing of inebilizumab for the treatment of NMOSD should be restricted to neurologists with expertise in treating NMOSD.

New Exception Status Products Continued...

PRODUCT	STRENGTH	DIN	BENEFIT STATUS	MFR
Uplizna (inebilizumab)	10mg/mL Vial	02543931	E (SF)	AGA
Criteria	<ul style="list-style-type: none"> • Inebilizumab should not be initiated during a NMOSD relapse episode. • Inebilizumab should not be reimbursed when used in combination with rituximab, satralizumab, eculizumab, or ravulizumab. • Approvals will be a for a maximum of 300 mg at 0 and 2 weeks and 300 mg every 6 months thereafter.

- Ranopto (ranibizumab)
- Vabysmo (faricimab)

Criteria Updates

- Xtandi (enzalutamide)
- Emtricitabine and Tenofovir Disoproxil

Change in Benefit Status

New Benefits

Temporary Benefit: Australian-Authorized Anagrelide Capsules

Temporary Benefit: Ireland-Labelled Pegasys Prefilled Syringe

Temporary Benefit: US-Authorized Disopyramide Capsules

Nova Scotia Formulary Updates

Criteria and Benefit Status Updates for Chronic Obstructive Pulmonary Disease (COPD) and Asthma Inhalers

An Atlantic Common Drug Review (ACDR) of inhaler therapies for COPD has been completed. This review included:

- A comprehensive assessment of clinical evidence (meta-analyses, RCTs etc.).
- Consideration of the [2023 Canadian Thoracic Society Guideline COPD Pharmacotherapy in Patients with Stable COPD](#) recommendations.
- Consultation with respiratory specialists in Atlantic Canada.

Following this review, the benefit status and criteria for coverage for inhalers used in COPD and asthma will be updated, effective September 1, 2025, as outlined below.

Key Changes to COPD Criteria:

- LAMA inhalers will move to full benefit status and no longer require exception status approval.
- LABA inhalers will be considered for patients who have failed or are intolerant to a LAMA inhaler.
- LABA/ICS inhalers will continue to be funded only as a component of triple therapy (LABA/ICS + LAMA) when criteria for triple therapy is met for patients who cannot use fixed dose triple therapy (Trelegy or Breztri).
- LABA/ICS inhalers will continue to be a benefit for patients with a diagnosis of overlapping asthma and COPD.
- Updated criteria for LAMA/LABA and LAMA/LABA/ICS inhalers are outlined below and will enable quicker access to therapy for patients with moderate to severe COPD.
- A new COPD exception status drug form has been created to reflect these changes and streamline requests for therapy.

Criteria and Benefit Status Updates for Chronic Obstructive Pulmonary Disease (COPD) and Asthma Inhalers Continued...

Key Changes to Asthma Criteria:

- LABA inhalers will no longer be listed as benefits for the treatment of asthma as they are contraindicated for use as single entity agents.
- A new asthma exception status drug form has been created to account for these changes and to streamline requests for therapy.

Nova Scotia Formulary Updates

New Exception Status Products

The following new products have been listed with the following criteria, effective **October 1, 2025**.

PRODUCT	STRENGTH	DIN	BENEFIT STATUS	MFR
Aflivu (aflibercept)	40mg/mL Pre-filled Syringe	02554178	E (SF)	APX
	40mg/mL Vial	02554194	E (SF)	APX
Yesafili (aflibercept)	40mg/mL Pre-filled Syringe	02558238	E (SF)	BIL
	40mg/mL Vial	02535858	E (SF)	BIL

Criteria

Effective October 1, 2025, patients currently taking the originator drug Eylea, are required to switch to a biosimilar version by January 1, 2026.

For aflibercept-naïve patients whose therapy is initiated after October 1, 2025, an aflibercept biosimilar will be the product approved.

Active (Wet) Age-Related Macular Degeneration

For the treatment of patients with neovascular (wet) age-related macular degeneration (AMD) who meet all of the following criteria:

- Best Corrected Visual Acuity (BCVA) is greater than 6/96.
- The lesion size is \leq 12 disc areas in greatest linear dimension.
- There is evidence of recent (<3 months) presumed disease progression [blood vessel growth, as indicated by fluorescein angiography, optical coherence tomography (OCT), or recent visual acuity changes].

- Steqeyma (ustekinumab)

Change in Benefit Status

Nova Scotia Formulary Updates

New Exception Status Products

The following new products have been listed with the following criteria, effective November 1, 2025.

PRODUCT	STRENGTH	DIN	BENEFIT STATUS	MFR
Bylvay (odevixibat)	200mcg Cap	02542641	E (SF)	MDP
	400mcg Cap	02542676	E (SF)	MDP
	600mcg Cap	02542684	E (SF)	MDP
	1200mcg Cap	02542692	E (SF)	MDP

Criteria

For the treatment of pruritus in patients aged 6 months or older with progressive familial intrahepatic cholestasis (PFIC) who meet all of the following criteria:

- Diagnosis of PFIC1 or PFIC2
- Severe pruritus with an ObsRO scratching score of ≥ 2 , while receiving usual care with at least 1 therapy used for symptomatic relief of pruritus.
- sBA levels $\geq 100 \mu\text{mol/L}$.

Initial Renewal Criteria:

- The prescriber must document response in pruritus, defined as an ObsRO scratching score of ≤ 1 or at least a 1-point decrease from baseline.
- If no response is observed after 3 months following the initial authorization, renewal of odevixibat will be for a 3-month trial of up to 120 mcg/kg per day dose (maximum of 7,200 mcg per day) and the patient will be required to then demonstrate response in pruritus, defined as an ObsRO scratching score of ≤ 1 or at least a 1-point decrease from baseline.

Subsequent Renewal Criteria:

- Subsequent renewals require documentation of continued maintenance of pruritus response.

Subsequent Renewal: <ul style="list-style-type: none"> The physician must provide proof that the initial response achieved after the first 6 months of therapy with zilucoplan for the MG-ADL score has been maintained. Claim Notes: <ul style="list-style-type: none"> MG-ADL score must be measured and provided by the physician at baseline. Treatment with zilucoplan should be discontinued in case of serious adverse events related to zilucoplan or secondary infection, such as meningococcal infection. Zilucoplan should be prescribed by or in consultation with a neurologist with expertise in managing patients with gMG. Zilucoplan should not be used concomitantly with rituximab, complement inhibitors or efgartigimod alfa. Approvals will be for a maximum dose of 16.6mg daily for patients <56 kg, 23 mg daily for patients ≥56 kg to <77 kg and 32.4mg daily for patients ≥77 kg. Initial Approval: 6 months Renewal Approval: 6 months 			

The Nova Scotia Biosimilar Initiative aims to expand the use of lower cost biosimilars on the Pharmacare Programs. On November 1, 2025, a new omalizumab biosimilar drug, Omlyclo, will be listed on the Nova Scotia Formulary.

Effective November 1, 2025, patients currently taking the originator drug product are required to switch to the biosimilar version by April 30, 2026.

For omalizumab-naïve patients whose therapy is initiated after November 1, 2025, the omalizumab biosimilar will be the product approved.

Prescribers can apply for an exemption if a patient can't switch to a biosimilar for clinical reasons. More information on this process can be found on our website: <https://novascotia.ca/dhw/pharmacare/information-for-prescribers-about-biosimilars.asp>

Nova Scotia Formulary Updates

New Exception Status Products

- Ferinject (ferric carboxymaltose)
- Noyada (captopril)
- Pexegra (pegfilgrastim)

Criteria Updates

- Dimethyl Fumarate
- Teriflunomide
- Wet Nebulization Solutions (Ipratropium Bromide, Salbutamol, Ipratropium Bromide and Salbutamol)

Change in Benefit Status

New Benefits

Nova Scotia Formulary Updates

New Exception Status Products

The following new products have been listed with the following criteria, effective December 1, 2025.

PRODUCT	STRENGTH	DIN	BENEFIT STATUS	MFR
Ferinject (ferric carboxymaltose)	50mg/mL Single-use Vial	02546078	E (SFC)	CSL

Criteria

Iron Deficiency Anemia

- For the treatment of iron deficiency anemia in patients intolerant to oral iron replacement products; OR
- For patients who have not responded to adequate therapy with oral iron.

Notes:

- Given the safety concerns associated with IV iron, it is expected that the patients will be carefully screened and will have tried various oral iron options before being eligible for IV iron.
- Details regarding oral iron tried, length of therapy, and outcome must be provided.

Iron Deficiency in Heart Failure

For the treatment of adult patients with heart failure and NYHA class II or III and who have:

- LVEF ≤ 40%
- Ferritin ≤ 300 mcg/L with a TSAT < 15%

Initial and Subsequent Renewal

If a patient requires iron repletion again after receiving the full dose of ferric carboxymaltose, the physician must provide proof that the patient meets initial approval criteria (NYHA class II or III, LVEF ≤ 40%, and ferritin ≤ 300 mcg/L with a TSAT < 15%).

Dasatinib	140mg Tablets	Various	E (SFC)	Various

New Benefits

The following products have been added as benefits; however, billing for methadone oral compounds remains unchanged. All methadone oral compound solutions must continue to be billed per mg using Methadone Oral Compound Sol PIN 00999734, regardless of the stock solution used. Only methadone stock solutions listed as benefits on the formulary may be used to prepare methadone oral compounds (e.g. methadone powder is not an approved ingredient and must not be used). Claims billed using the DINs for any methadone HCl 10mg/mL solution will be rejected.

PRODUCT	STRENGTH	DIN	BENEFIT STATUS	MFR
