Section 1: The Optimum Use of Marine Resources

Future Seafoods Inc. have been successfully maintaining and managing Lease 1386 (Tracadie Harbour, Antigonish County) since 2019.

The purpose of this proposal is Renew our aquaculture and lease licence that expires on November 1, 2024, for Lease 1386. This lease is in contaminated waters. The product on this lease will be relayed to Lease 1351 for depuration prior to being sold in the market. The renewal of this lease will allow us to continue with our operations in Nova Scotia.

As you review this document, you will see that a lot of time, effort, thought, and research went into this plan to mitigate risk, impacts and success.

This lease will continue to be used for its original purpose of Bottom Culture with Gear.

The approval of this request will allow optimum use of Marine Resources in the Tracadie area by increasing the footprint of product available for market. In addition, it is anticipated that with the growth of the farm and increased product, there will be a need to expand and high local laborers to assist with the operation.

Section 2: The Contribution of the Proposed Operation to the Community and Provincial Economic Development

2.1 Production Plan

The purpose of this production plan is to provide the details on the renewal of Lease 1386 for Future Seafoods Inc.

Currently the lease is being successfully maintained by Future Seafoods Inc. as a “Bottom Culture with Gear” for farming.

At this time, the approximate maximum number of pieces on Lease 1386 at any given time is 2.5 million (includes spat/small oysters). Existing product and seed (wild set) on Lease Site 1386 will continue to be harvested.

The grow out period at this lease site (1386) is approximately 3-5 years.

The plan is to continue to work this lease ground with its natural spat set as well as add seed from lease 1351 (as needed) to continue to increase production to at least 500,000 pieces each year. This is a work in progress as Future Seafoods Inc. continues to expand this lease area moving forward into the future.

At times, the lease site may need to be used for overnight storage of harvested product. Approximately 30 pods containing 500 lbs of oysters will be stored at a given time. This will allow product to remain fresh while staff are onsite harvesting the product before loading and moving to Lease 1351 for decontamination.

The Pods are very similar to the oyster grow design. Each pod is made of aluminum which is 32 inches high, 40 inches wide and 34 inches long. Each pod holds 12 Vexar bags which are secured in the pod with an aluminum securing rod.

The lease presently has a natural spat set of approximately 1 million plus seed.

We apply for the MCFR licence each year; however, this year the licence has not yet been issued. Awaiting DFO.

Note: *Spat set / harvest amounts do not take into account natural occurring death of product for various reasons that occur in the life of an oyster.*

2.2 Infrastructure

Not applicable

2.3 Services and Suppliers

Items needed such as rope, buoys, and fishing supplies (gloves, oil pants, boots, gas, etc.) will be purchased in nearby areas of Nova Scotia.

2.4 Employment

There will be a need for approximately 1 to 4 seasonal employees.

2.5 Other Economic Contributions to the Local Community and Province

Other than providing jobs, to allow employees to live and shop in the area, we are unsure of

economic contributions at this time.

2.6 Adverse Economic Impacts

None that we are aware of at this time as the lease site currently exists.

Section 3: Fisheries Activities in the Public Waters Surrounding the Proposed Aquaculture Operation

3.1 Impacts of Fisheries Activities

There are no impacts to the commercial/public fishery as our site currently does not impact them.

There are no food or ceremonial impacts in the area surrounding this site. There have been no issues with any impacts in this area from this lease. It has been operating in good standing since 2014.

Section 4: Oceanographic and Biophysical Characteristics of the Public Waters

4.1 Oceanographic Environment

This is a contaminated area. There is no other relevant information that we are aware of for this section.

4.2 Environmental Monitoring

There are no anticipated impacts to the benthic (crabs, clams, lobster, worms, etc.) environment.

4.3 Site Design

This is a contaminated lease site.

There are no past major events that we are aware of since we have been working at this site.

We have not observed or been advised of any issues with the water characteristics in this area.

We don't see any oceanographic impacts from our plan. This renewal will enable us to grow our lease/farm business as we grow our production in the future.

Section 5: The Other Users of the Public Waters Surrounding the Proposed Aquaculture Operation

5.1 Impacts to Other users including Wildlife

There are no impacts to other users including wildlife in the area.

This is a renewal plan for our existing lease/licence so there should continue to be no impacts to other users/wildlife.

5.2 Impacts by Other users including Wildlife

We do not foresee any impacts to any wildlife in the area from this renewal plan as lease has been operating in good standing since 2014.

Section 6: The Public Right of Navigation

6.1 Navigation Protection Act (NPA) approval

Not Applicable as there is an existing NPA for this lease site since this is a renewal of a lease that has been operating in good standing since 2014.

Section 7: The Sustainability of Wild Salmon

7.1 Identification of Local Salmon Populations

Not Applicable to the application/operation.

7.2 Support of the Sustainability of Wild Salmon

Not Applicable to the application/operation.

Section 8: The Number and Productivity of Other Aquaculture Sites in the Public Surrounding the Proposed Aquacultural Location

8.1 Interactions with Other Aquaculture Operations

Not Applicable to the application/operation.

Section 9: Development Viability

9.1 Financial Availability

Future Seafoods Inc. have successfully operated their seafood business since 2002. The owners have been harvesting oysters since they were in their teens in either the public fishery or on a lease site. They have extensive knowledge and experience to continue to make this work. They also have sufficient gear to continue to do the job, so no investment needed for equipment.

There are no plans to request any financial assistance as part of this renewal request.

9.2 Technical Ability

As indicated above, Future Seafoods Inc. is very experienced in the aquaculture industry. They currently have the education, business experience and perseverance needed to make this venture successful.

As needed, laborer's may be hired to assist with the harvesting process as the yield on the lease grows moving forward to maximum capacity.

9.3 Compliance History

Not Applicable to the application/operation. No environmental issues.
