

Aquaculture Site Register
RE# 9030

Registry File Number:	RE#9030	Type:	Marine
Location:	Ship Harbour	Size:	4.92 HA
County:	Halifax	Site Map / Boundaries:	Refer to map below
Prior Issued Aquaculture Site:	AQ#0184		

Previously Authorized Species and Methods of Cultivation		
Species Type:	Common Species Name(s):	Methods of Cultivation:
Shellfish	Blue mussel Giant sea scallop	Suspended

Additional Species and Methods of Cultivation Eligible for Consideration¹		
Species Type:	Common Species Name(s):	Methods of Cultivation:
Shellfish	American oyster Bay scallop European oyster Other species native to this water body are eligible but must be specified in a proposal	Suspended
Marine Plants	Sugar kelp Dulse Nori Other species native to this water body are eligible but must be specified in a proposal	Suspended

¹ Subject to consultation with Federal and Provincial agencies per Subsection 40(1) of the *Aquaculture Licence and Lease Regulations*.

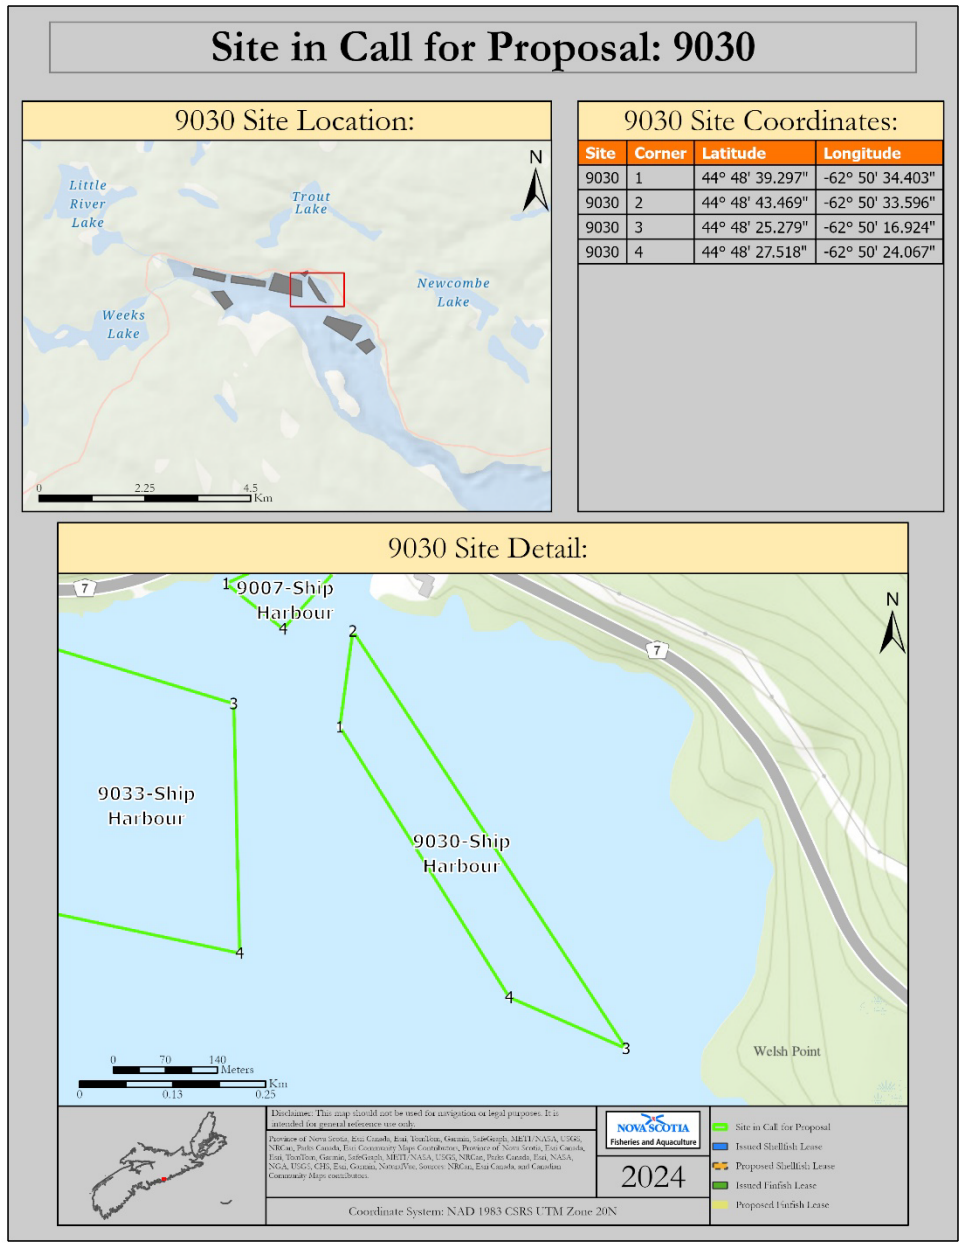

Figure 1. Vicinity map

Location:

Approximate center coordinates (NAD83): Latitude: 44° 48' 33.782", Longitude: -62° 50' 26.974"

This site (**Figure 1**) is located in the northeastern region of Ship Harbour, ranging approximately 40m to 310m from the northeastern shoreline, northwest of Welsh Point.

There are three sites within relative close proximity to this site. One site is approximately 70m north of this site, which currently does not have an existing aquaculture licence and lease issued and is in the Registry of sites eligible for reallocation as RE#9007. Another site is approximately 140m west of this site under Registry RE#9033. Another site is approximately 270m south of this site under Registry RE#9028. There are a total of eight (8) sites within the area known as “Ship Harbour”, none of which currently have an existing aquaculture licence/lease issued to them as of the date of this report.

There are no known public docking facilities observed within the immediate vicinity of this site. The nearest wharves or small craft harbours are located at Owls Head Harbour (approx. 4.5 NM south / 7.5 NM over water) and Murphys Cove (approx. 3.5 NM southeast / 7 NM over water). Proponents should engage with local harbormasters (or equivalent) to discuss opportunities and capacity to use those facilities. A proponent’s knowledge of the Ship Harbour region’s private commercial docking facilities may reveal additional locations that can be used in arrangement with the owner.

Eelgrass:

Eelgrass is an ‘Ecologically Significant Species’ (ESS) and is present along the marine coast of Nova Scotia at varying degrees of abundance, with many factors contributing to its growth, survival and reproduction. The type and spacing of suspended aquaculture gear can influence the amount of light reaching the water column and the sea floor where eelgrass is present. Proponents are expected to include plans on how to eliminate or mitigate the impact of their aquacultural operation on any eelgrass present within and near to the site, where applicable. In addition, any proposed gear must have at least a 3-metre spacing between each longline.

Water Quality:

This site is located within an area classified as “approved” for harvesting of all species of bivalve mollusks by the Canadian Shellfish Sanitation Program as of May 23, 2024. Proponents are expected to check, on a regular basis, with the Department of Fisheries and Oceans Canada for the most current classification status. (<https://www.dfo-mpo.gc.ca/shellfish-mollusques/cssp-map-eng.htm>).

Water Depth:

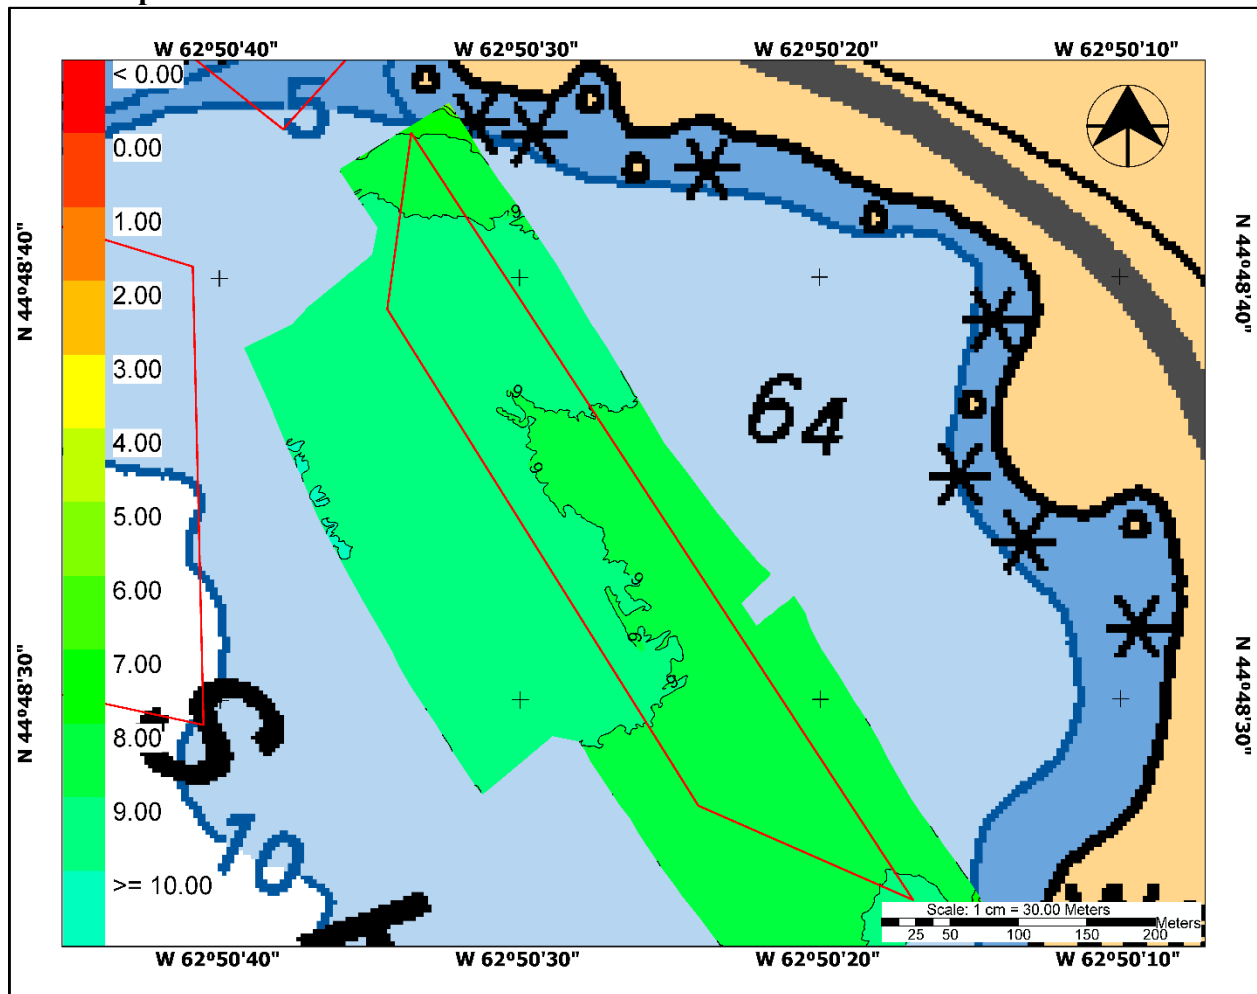

Figure 2. Site map with depth

In November, 2023, Nova Scotia Department of Fisheries and Aquaculture scientists collected bathymetry data throughout the prospective area using a 3D side-scan sonar system. **Figure 2** displays a representation of the resulting depth data collected, corrected to chart datum (depth at lowest low water during large tide). Based on data collected, the site has relatively consistent depth ranging from approximately 6m to 7m. According to predictions from the nearest CHS tide station, depths in this area will vary by as much as 2m or more between high and low tides.

In general, shallow areas and areas with lower current speeds can expect seasonal ice build-up and ice movement. Proponents should include plans on how to mitigate the impact of ice on their aquaculture operation where applicable, within their proposal.

Wildlife:

The site is approximately 180m from the Tangier Grand Lake Wilderness Area, however the protected area resides on the mainland opposite Highway 7 and is not expected to have any impact to this site.

Sea Ducks are known to be present within the vicinity. Proponents should include plans on how to mitigate the impact of predation on their aquaculture operation within their proposal.

Invasive tunicate species are known to be present in the marine environment. Proponents should include plans on how to mitigate the impact of tunicates on their aquaculture operation within their proposal.

Gear Present:

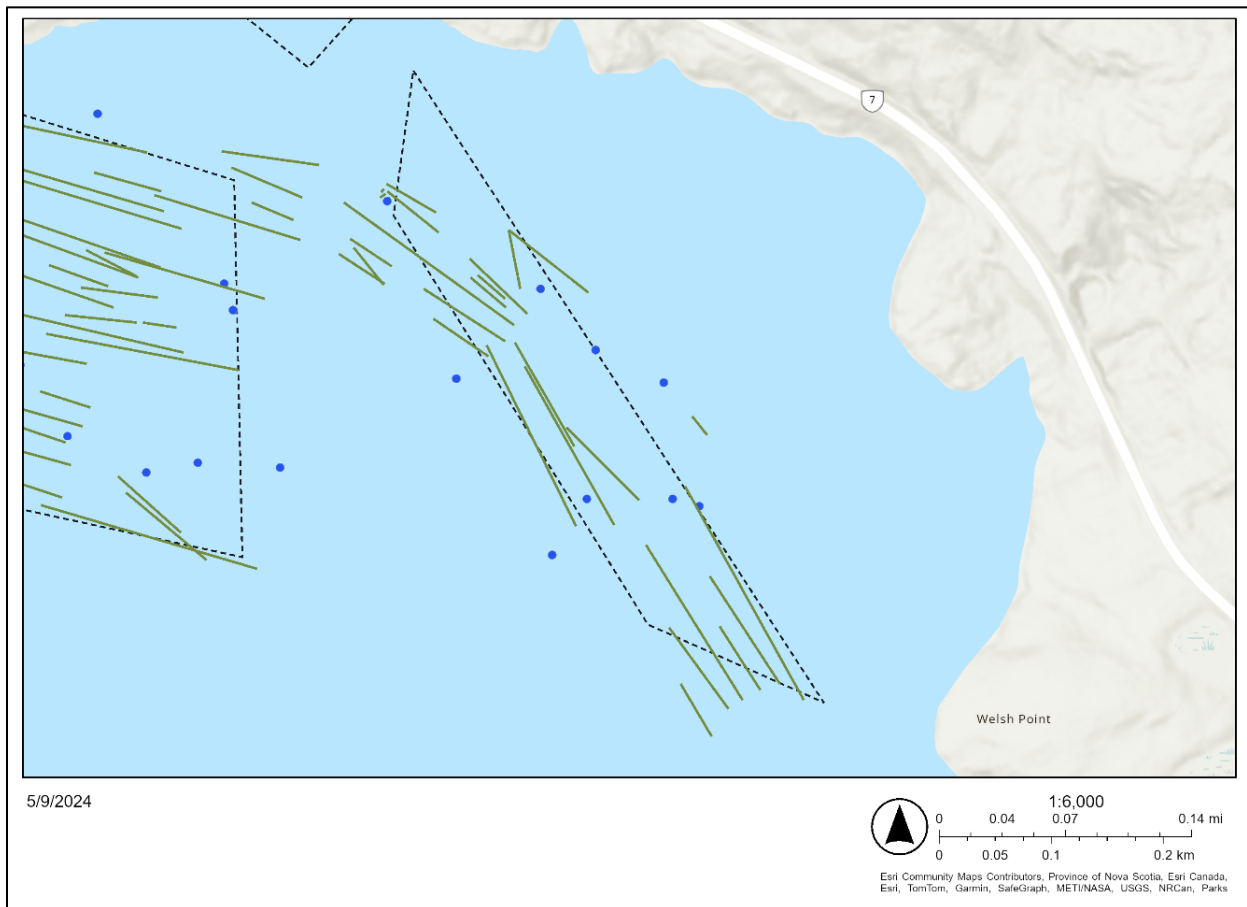

Figure 3. Site map of existing gear. Green lines indicate continuous targets, anchored at each end. Blue dots indicate the location of single point targets, typically clusters of floating rope or submerged buoys.

The Department is aware of the presence of pre-existing aquaculture gear in and around this site. Refer to **Figure 3** for details regarding the estimated location and type of gear present. Proponents are expected to include plans on how they will remediate the site (to either remove and safely dispose of the gear and/or to restore the gear to working condition) prior to the introduction of any product.

Site History:

An aquaculture licence and lease was first issued for site AQ#0184 in 1994. The licence and lease were consecutively renewed until May 8, 2023, when the site was discontinued.

Accuracy and Currency of Data:

The Nova Scotia Department of Fisheries and Aquaculture strives to provide accurate and up-to-date information in this report. However, this report is not a peer-reviewed scientific publication and is instead intended to be a summary representing the general conditions regarding the site’s suitability for the type of aquaculture under consideration by a Proponent interested in responding to a call for proposals (and subsequent application for an aquaculture licence and lease) for this site.

The Department does not make any guarantees as to whether or not an aquacultural operation would be successful at this site, nor does it absolve a person from ensuring that they obtain any additional necessary permits, approvals or licenses from the relevant Municipality, Provincial or Federal agency prior to conducting aquaculture.

Performance Reviews Conducted by Administrator:

A performance review was conducted on the aquacultural operation of site AQ#0184, pursuant to Sections 71-72 of the *Aquaculture Licence and Lease Regulations* (the “Regulations”). Any concerns raised during the Performance Review have been added to the above site details.

Based on the performance review conducted above, AQ#0184 has been entered into the registry of aquaculture sites available for reallocation in the Province of Nova Scotia under Reference Number RE#9030.
