

LaMPSS Release 2.7.2

Release Notes for External Service Providers

Person Management

- **Details – Marital Status**
 - Enhancement: TFS 13767 – Marital Status – changed label for “Separated/Deserted” to “Separated”

Self-Serve Portal

- **Self-Serve - Login**
 - Usability: TFS 12234 – Added information to the login page about supported browsers and a link to the compatibility guide. This will help users that are having trouble logging in for the first time or from a new computer.
 - Usability: TFS 12222 – Improved messages and warnings shown when a password is about to expire
- **Self-Serve - Organization Funding – Resubmitting applications**
 - Usability: TFS 11705 – enhancement to make the resubmission notification (“Application Resubmission Requested”) remain on the homepage until the application is resubmitted. Previously, the notification was deleted as soon as the application was downloaded, which did not allow the user to download the application again if necessary.

External Case Management

- **User Home Page**
 - Defect Fix: TFS 14194 – When clicking on an “Action Required” notification on the User Home Page, it displayed an error, but worked correctly when the same notification was clicked on the Case Home Page. The link now works correctly when clicked from either the User Home Page or the Case Home Page.
- **Adding a Case – Copy from Previous Case**
 - Enhancement: TFS 12260 – Previously, the system only allowed copying information from closed cases that had progressed to at least RTWAP Development status. Now, you can copy cases that were closed after Intake or Assessment - in other words, you can now copy information from any previous case with the same case-managing organization with no restrictions.

- **Application Package**
 - Defect Fix: TFS 12600 – In some cases, when asked to resubmit the application, the notification “Application requires resubmission, information missing” was not auto-completing, allowing case manager to accidentally resubmit yet again after the agreement was active. The system now ensures that the notification is auto-completed correctly.
- **Action Plan – Intervention / Action Plan End Dates**
 - Usability: TFS 12204 – on the Action Plan Details screen, changed the screen label for the intervention “End Date” to “Planned End Date” to clarify the meaning vs. the Actual End Date
 - Usability: TFS 15029 – On the Action Plan Summary screen, at the top right above the list of interventions, in order to clarify the date that is displayed there, we have changed the label to “Action Plan End Date”. The Action Plan End Date is the latest Planned End Date (for Planned or In Progress interventions) or Actual End Date (for Complete or Incomplete interventions) for all the interventions in the plan. This is a key date from which the due dates for tasks related to recording outcomes, as well as the default effective dates for those outcomes, is calculated.
 - Usability: TFS 12205 – on the Action Plan Summary screen, under the “End Date” column, we now show the “Planned End Date” for “In Progress” and “Planned” interventions, and the “Actual End Date” for “Completed” and “Incomplete” interventions. This reflects the date that is most relevant depending on the status. A mouse over popup indicates which of the dates is being shown.
 - Defect Fix: TFS 11851 – when an intervention is deleted, the system now properly recalculates the due date for the Close Action Plan task
- **Action Plan – Adding Interventions**
 - Defect Fix: TFS 11749 – the system now prevents new interventions from being added after the RTWAP Closure Employment Outcome has been recorded
- **Tasks – “Close Action Plan”**
 - Enhancement: TFS 13770 – the outcome codes for the “Close Action Plan” task have been modified:
 - REMOVED: “Incomplete – Found employment (follow-up)”
 - REMOVED: “Incomplete – Started a business (follow-up)”
 - ADDED: “Action Plan Incomplete (follow up)”

Previous data that used one of the removed codes has been converted to use the new code.
- **Outcomes**
 - Defect Fix: TFS 12354 – a number of issues related to proper calculation of the outcome effective date have been addressed
- **Enhanced Services**
 - Defect Fix: TFS 13803 – Added “LMA Eligible” to the Primary Audience for Group and Individual sessions
 - Defect Fix: TFS 12832 – Do not allow changing status to “Completed” without an associated case id
 - Defect Fix: TFS 12357 – Fixed issues with wrong case sometimes getting added when a participant has more than one associated case
 - Defect Fix: TFS 11719 – Fixed incorrect results when searching by SIN – should return only the enhanced services that the participant with is registered for or has participated in

- **EAS Activity Report**

- Defect Fix: TFS 11815 – in the “Enhanced Services – Individual” section, corrected counts for “TOTAL UNIQUE Participants (NEW this period)” and “UNIQUE Participants (NEW this period)”
- Defect Fix: TFS 13321 – in the “Enhanced Services – Individual” section, corrected counts for “TOTAL UNIQUE Participants” when there are multiple services of the same type. Previously, the reports was calculating the unique participants in EACH service; then adding those together. Now, the report first pools all the participants from services of the same type into ONE LIST; then counts the unique participants from the combined list.
- Usability: TFS 13322 – in the “Enhanced Services – Individual” section, the report now sorts services by Service Type, then by Service Name – previous order was random, and hard to read if there were large numbers of individual services.
