(March 31, 2004)

#### **Mira River Provincial Park** Albert Bridge, NS

The high quality clay found along the riverbanks led the French to establish a brickyard at this site in 1727. The bricks were used to build the Fortress of Louisbourg.

#### **Smileys Provincial Park Brooklyn, NS**

White gypsum cliffs are common along rivers and streams near the park. The gypsum, along with salt and limestone, was deposited here over 250 million years ago. In places the gypsum is 425 m thick (1,400 ft.)

#### **Thomas Raddall Provincial Park** Port Joli, NS

At Moody Bog, in the northern part of the park, layers of acidic sphagnum moss or "peat" are built up when organic matter is produced faster than it decomposes. Various species of orchids find refuge here, as does the carnivorous pitcher plant and shrubs such as cranberry, leatherleaf, huckleberry and Labrador tea.

## **Caddell Rapids Look-off** Stewiacke, NS

Hundreds of bald eagles migrate through Colchester and Hants counties each winter when the lakes and shorelines of Cape Breton freeze over. Caddell Rapids Look-off provides an excellent vantage point to view eagles as they feed on tomcod travelling up the Shubenacadie River to spawn.

## **Uisge Ban Falls Provincial Park** New Glen, NS

The name Uisge Ban comes from the Gaelic meaning "white water". The

> park is located near New Glen, Victoria County (Hwy 105, Exit 9) . A four km (2.4 mi.) trail through a climax hardwood forest, provides access to view the 16 m (50 ft.) high waterfall. The walls of the gorge tower 50 m (500 ft.) on either side of the falls.
