

MINERAL RESOURCE LAND-USE MAP OF THE FRAMBOISE AREA (11F/9) (1:50 000) OFM ME 2000-4 (11F/9) Version 2

11F/9 Framboise Compiled by D.B. Hopper, F.J. Bonner, B.E. Fisher and A.N. Murphy Halifax, Nova Scotia

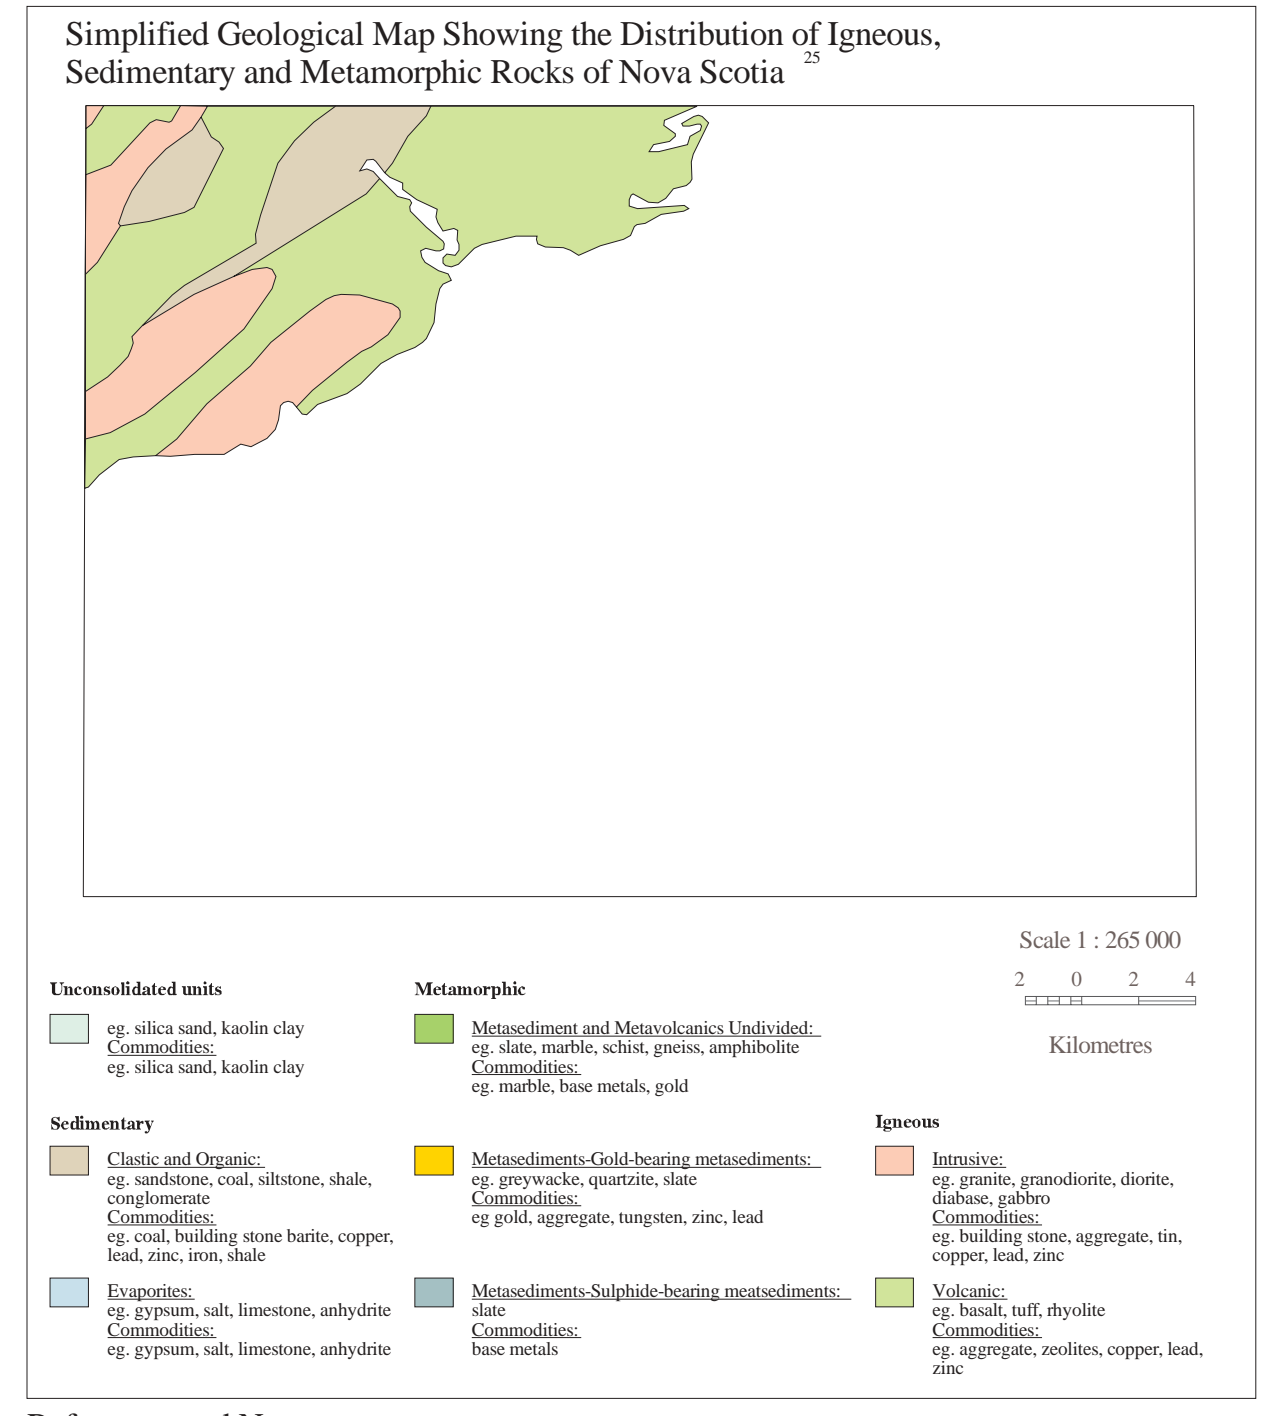

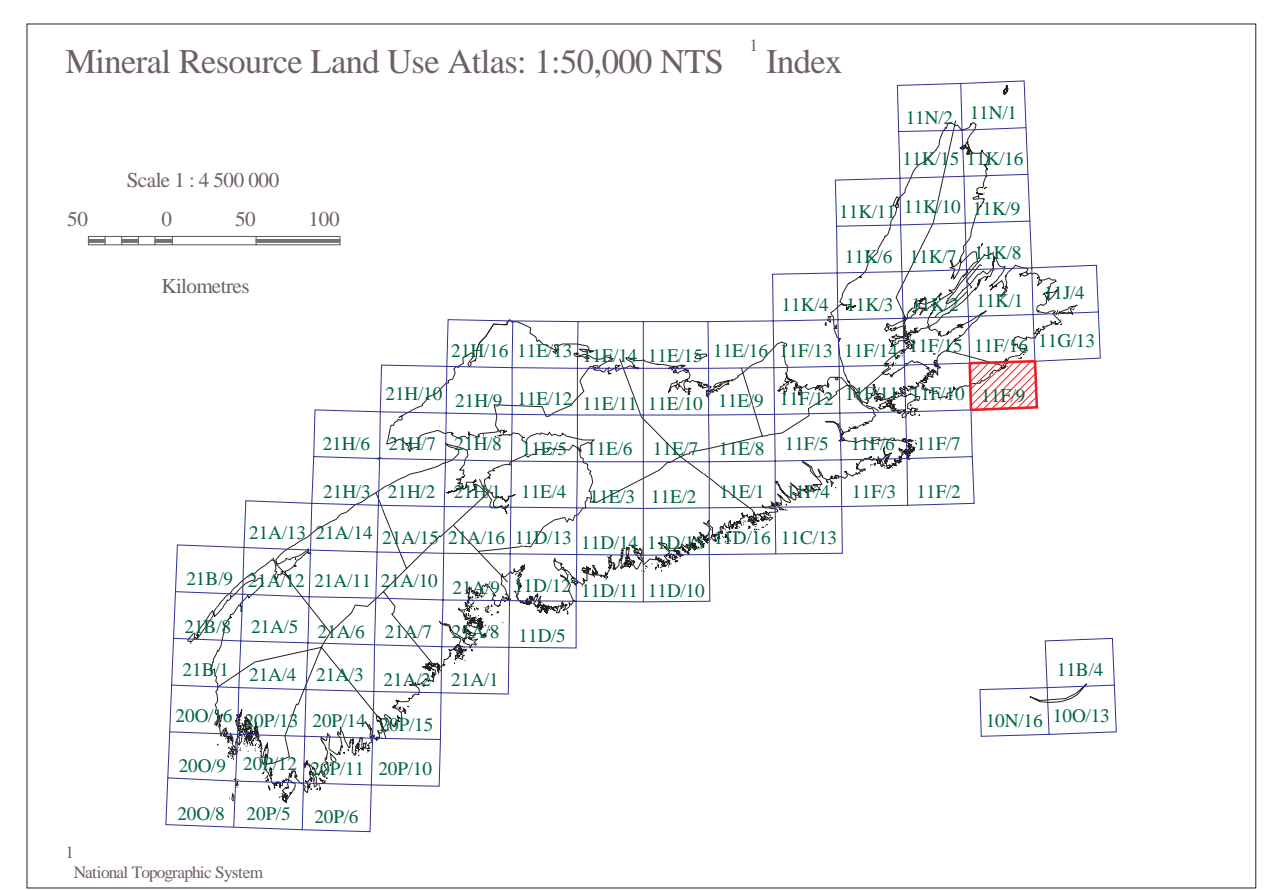

A total of 98 planimetric (1:50 000 scale) Mineral Resource Land Use (MRLU) maps combine to form a thematic atlas, which covers the province of Nova Scotia including all near-shore islands and Sable Island.

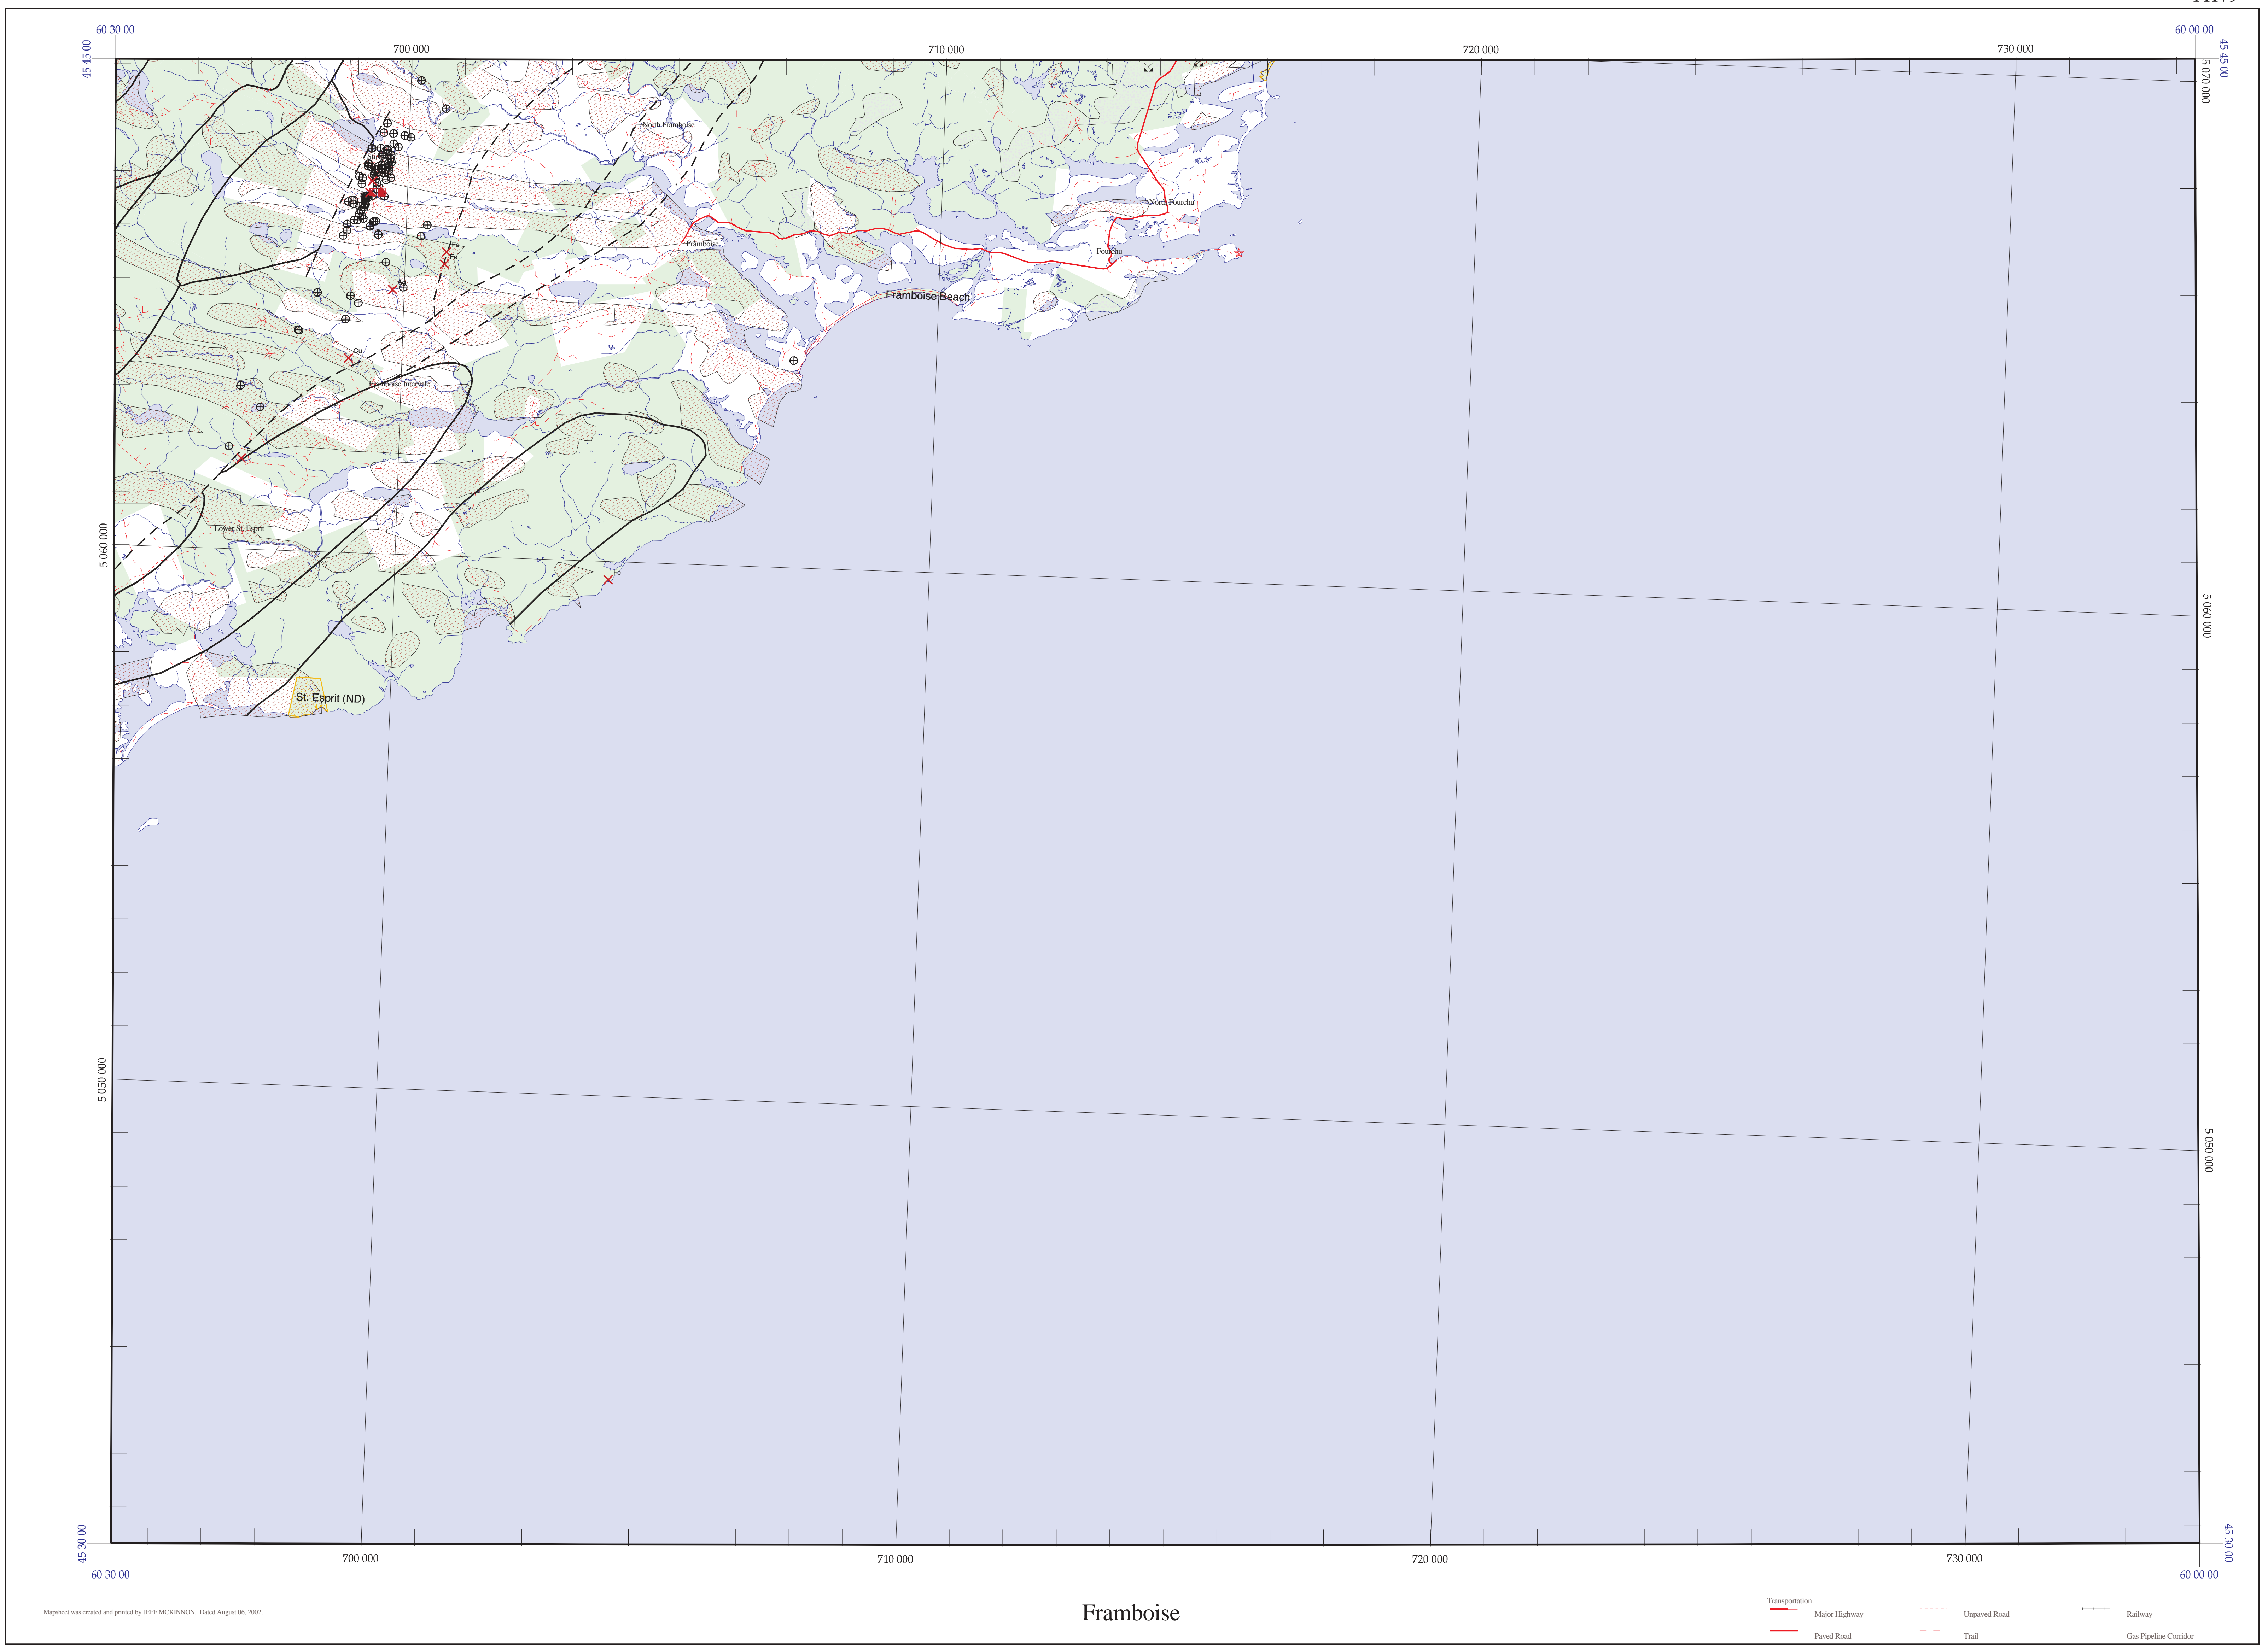

The MRLU maps display the location and distribution of mineral and energy resources and related activities as well as aspects of environmental geology that relate to land-use and environmental planning.

Over the course of developing this project, several companies have contributed to the preparation of these maps, which involved gathering and organizing data from databases managed by the department as well as other government departments, agencies and non-government organizations.

The thematic information shown on this map came from many different government and non-government sources. The NSDNR accepts no liability for errors, deficiencies or omissions on the map.

References and Notes: Mineral occurrence database, NSDNR, 1999. Digital Geoscience Data Product DP0018, Version 3, 1998. This database can be used with FPO16, the Mineral Occurrence Query Program, which is a viewing and searching program with instructional manual for use with Mineral Occurrence Database.

MINERAL AND AGGREGATE RESOURCES, ENERGY RESOURCES, GEOLOGY FOR LAND-USE / ENVIRONMENTAL PLANNING, LAND DESIGNATION AND ACCESS. This section contains detailed legends for various resource types and land designations, including symbols for mineral occurrences, coal mines, fuel peat, geothermal resources, and various protected and access areas.
