Airborne Magnetic Data Vertical Gradient (First Derivative)

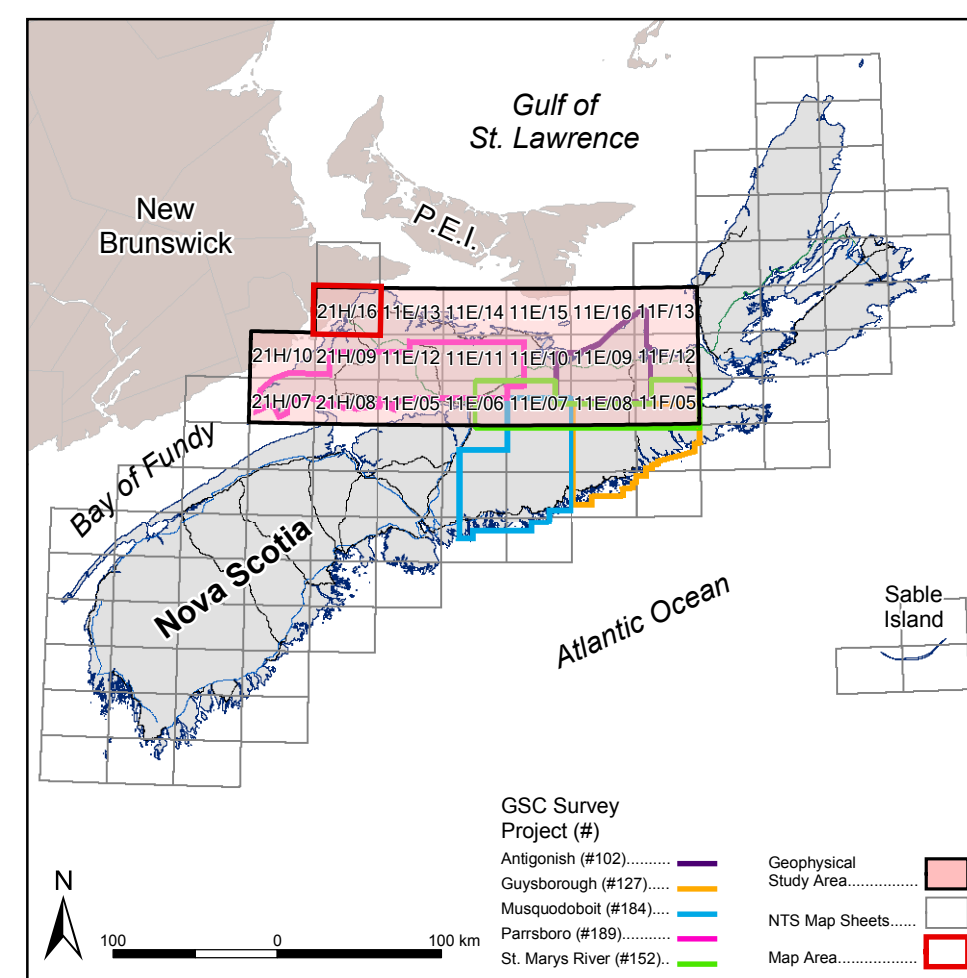

Airborne geophysical data, used to produce this map, were supplied by the Geological Survey of Canada (GSC) - Geophysical Data Centre, 615 Booth St., Ottawa, Ontario K1A 0E9. These magnetic data were digitized from older vintage GSC analogue data. The data, used to produce this map image, are the calculated first vertical derivative of the inverted and decorrelated measured total field response. Vertical gradient data enhance near-surface magnetic sources at the expense of deeper features. Zero value gradient contours also correlate closely with the vertical projection of magnetic contacts. The 24-bit colour map image was produced with a 25 m pixel size. Shading was from the south at 35° above the horizon. For complete details please refer to Open File Report by King (2004).

Regional Key Map

Map Notes

Universal Transverse Mercator Projection (UTM), Zone 20, Central Meridian 63°00' West.

North American Datum (NAD) 1927.

Base and digital data derived from the Nova Scotia Topographic Database (NSTDB). The NSTDB is available from Service Nova Scotia and Municipal Relations (SNSMR), Land Information Services Division (LIS), Nova Scotia Geomatics Centre (NSGC), Amherst, Nova Scotia.

Cartography and reproduction by Nova Scotia Department of Natural Resources, Geoscience Information Services Section, 2004-2005.

Disclaimer

The information on this map may have come from a variety of government and nongovernment sources. The Nova Scotia Department of Natural Resources does not assume any liability for errors that may occur.
