ECONOMIC GEOLOGY SERIES ME 2007-1  
*G. PRIME AND F. J. BONNER*

**Natural Resources**

Honourable David Morse  
Minister

Peter Underwood  
Deputy Minister

Halifax, Nova Scotia  
2007

**Cover photo**

This photo shows a typical granite outcrop in the study area and the hand tools used to collect samples for aggregate tests. More details of the methods used in this study are provided in Appendix 1.

Publications of the Mineral Resources Branch are available on line (<http://www.gov.ns.ca/natr/meb>) or through the Department of Natural Resources Library:

1701 Hollis Street, 3rd Floor Founders' Square  
Halifax, Nova Scotia

# Table of Contents

	Page
Abstract .....	1
Acknowledgments .....	2
Introduction .....	3
Part 1. Resource Development Challenges in a Growing Urban Centre - Halifax Regional Municipality .....	5
A Demographic Profile of Halifax Regional Municipality .....	5
Aggregate Resources in Metro .....	5
Aggregate Resource Development Issues and Concerns.....	6
Future Aggregate Supply Options for Metro.....	8
Part 2. Geotechnical Discussion of Bedrock Aggregate Potential in Western Halifax	
Regional Municipality.....	13
A Resource Study with the Future in Mind.....	13
Methodology.....	13
Scope .....	13
Regional Geology and Physiography .....	13
Results .....	15
Part 3. Aggregate Resource Exploration and Development, A Strategic Planning Approach.....	25
Proximity to a Limited Access Highway.....	25
Cost/Benefit Analysis of Resource Development in this Area.....	26
Proposed Exploration Strategy for New Quarry Development .....	27
Final Thoughts.....	28
References .....	31
Appendix 1. Methodology of this Study .....	33
Preliminary Phase .....	33
Field Phase.....	34
Analytical Phase .....	34
Appendix 2. Description of Grain Size and Textural Terms used in this Study .....	37
Appendix 3. Sample Descriptions.....	39
Appendix 4. Important Characteristics to Consider when Evaluating Granitic Rocks in Glaciated Terrain.....	47
Appendix 5. Test results from Sample of Aggregate Produced in Quarry on Bowater Mersey Paper Company Limited Property.....	51

## List of Tables

<b>Table 1.</b> Comparison of haulage methods for aggregate. Note that all numbers are based on imperial measure and the United States dollar (after Barker and Harben, 2002).....	9
<b>Table 2.</b> Standard rates for truck haulage of aggregate in Nova Scotia (after Nova Scotia Department of Transportation and Public Works, 2004). .....	10
<b>Table 3.</b> Aggregate test results for samples collected in this study. Note that only those samples labelled with HRM were taken as part of this research.....	17

## List of Figures

<b>Figure 1.</b> Boundaries of Halifax Regional Municipality (HRM) as well as urban/rural areas within HRM (from HRM website <a href="http://www.halifax.ca/planning/trends/sld008.htm">www.halifax.ca/planning/trends/sld008.htm</a> ).....	5
<b>Figure 2.</b> There are three active primary sources of aggregate in the core metropolitan area of the HRM. They are Conrad Brothers, Rocky Lake Quarry and Gateway Materials. ....	6
<b>Figure 3.</b> Map showing the study area in relation to the Halifax - Dartmouth metropolitan area.....	14
<b>Figure 4.</b> Geological map of the study area showing sample locations. Note that the geology consists entirely of South Mountain Batholith granitic rocks. See Figure 5 (in back pocket) for greater detail. ....	16
<b>Figure 5.</b> Geological map of western Halifax Regional Municipality aggregate study area, Halifax County, Nova Scotia, showing sample locations and aggregate test results (Open File Map ME 2007-3).....	in pocket
<b>Figure 6.</b> Digital Elevation Model map of western Halifax Regional Municipality aggregate study area, Halifax County, Nova Scotia (Open File Map ME 2007-4). ....	in pocket
<b>Figure 7.</b> Map showing distances, in the study area, to nearest aggregate market access point at Exit 5, Upper Tantallon. See Figure 6 (in back pocket) for topographic details in the region.....	18
<b>Figure 8.</b> Exit 3 on Route 103 is a connector to the Otter Lake Sanitary Landfill. Perhaps a similar structure could be constructed in the study area to provide dedicated access to a new quarry site. ....	26
<b>Figure 9a.</b> The hand tools used in sample collection included a pinch bar, sledge hammers and chisels.....	35
<b>Figure 9b.</b> Samples were typically taken from small outcrops. ....	35
<b>Figure 10.</b> Schematic block diagram of the South Mountain Batholith illustrating features that may affect aggregate quarry development in these granitic rocks. ....	48
