Mineral Resources

a. barite, North Greenville; b. celestite, Loch Lomond;
c. fluorite in granite, Leminster.

TABLE OF CONTENTS

	Page
<u>Chapter 1</u>	
Introduction	1
Nature and purpose of report	1
Barite, celestite and fluorite: uses, specifications, potential and prices	1
Barite	1
Celestite	3
Fluorite	4
Review of production and consumption of barite, celestite and fluorite	5
Terminology	9
Acknowledgements	9
Field Investigations	10
Previous work	10
Present work	11
Determination of barite, celestite and fluorite	12
Chemical methods	12
Mineralogic methods	12
General review of mineralogic characteristics of barite, celestite and fluorite	13
General review of geochemical characteristics of barium, strontium and fluorine	15
<u>Chapter 2</u>	
Observations and results of investigations	23
The distribution of barite, celestite and fluorite in sedimentary, igneous, and metamorphic rocks in Nova Scotia	23
Styles of deposits present in Nova Scotia	29
Style A	31
Style B	31
Style C	33
Style D	33
Style E	34
Style F	35
The style classification of the barite, celestite, fluorite showings in Nova Scotia	37
The spatial distribution of the barite, celestite, fluorite showings with regard to the geology of Nova Scotia	38
Other pertinent observations and results	40
Conclusions and recommendations	41
Age of mineralization of barite, celestite and fluorite in Nova Scotia	41

Late Triassic Age	42
Early Permian-Late Carboniferous Age	42
Early Carboniferous Age	43
Mid and Late Devonian Age	43
Some geological settings in Nova Scotia and the significance of these to potential barite, celestite and fluorite mineralization	44
The Horton Group-Windsor Group contact	44
The pre-Carboniferous basement rocks-Windsor Group contact	45
The Glooscap Fault System	46
The Upper Carboniferous rocks	46
The Upper Windsor Group rocks	47
The pre-Carboniferous metamorphic rocks	48
The "granitic" rocks	48
