

Natural Resources

Mineral Resources Branch Release Notice for March 2009

Mineral Occurrence Database

The Mineral Resources Branch maintains an inventory of mineral occurrences in the province. This Mineral Occurrence Database is a computer-based inventory of metallic and industrial mineral occurrences. The Mineral Occurrence Database contains information for upwards of 3,000 mineral occurrences. The database is continually being updated with new mineral occurrence entries as well as additional information added to entries already contained within it.

New Online Database Query Application

The Mineral Resources Branch is releasing a new online query application for its Mineral Occurrence Database. Clients can search this database online through an Internet browser using a number of attributes and produce a report of the selected mineral occurrences that they are interested in.
