

## Hibernia Wildlife Management Area

This wildlife management area was established in 1975 as a site for an Acadia University research project on ticks. The location mapped above with a green outline may be approximate. This wildlife management area is located on privately owned land. Hunting and trapping of the following species are prohibited: beaver, muskrat, bobcat, fox, raccoon, weasel, fisher, marten, cougar, snowshoe hare, skunk, porcupine, or any other animal valuable for its fur.

The wildlife management area includes approximately 93 hectares of woodland, 14 hectares of treed bog, and 10 hectares of built-up land, utility corridor and gravel pit.
