

Appendix C - GHG Calculations: Emissions Summary

Turbine Fabrication

Parameter	Value	Unit	Comments	Source
Total Turbine Weight	668.1	tonnes/turbine	Based on weights provided in : Stantec Decommissioning plan, May 2025, extrapolated to 118m hub height	rpt
Steel	593.9	tonnes/turbine		
Fiberglass	41.4	tonnes/turbine		
Polymers	25.4	tonnes/turbine	Based on turbine composition material breakdown by mass for the Delta400 turbine, LCA of Nordex turbines, 2024	LCA Report - EPD of a Nordex wind farm with Delta4000 N163-6.X turbines (confidential data in Annex B).pdf
Aluminium	4.0	tonnes/turbine		
Copper	3.3	tonnes/turbine		

Emission Factors

Parameter	Value	Unit	Comments	Source
general steel	2.57	TCO2e/T	source: Inventory of Carbon and Energy v4.1	ICE Educational: Download Confirmation Page - Circular Ecology

Polymers	7.92	TCO2e/T	source: Inventory of Carbon and Energy v4.1	ICE Educational: Download Confirmation Page - Circular Ecology
Aluminium	13.06	TCO2e/T	source: Inventory of Carbon and Energy v4.1	ICE Educational: Download Confirmation Page - Circular Ecology
Copper	2.71	TCO2e/T	source: Inventory of Carbon and Energy v4.1	ICE Educational: Download Confirmation Page - Circular Ecology

Emissions	36314.78039	TCO2e	(B5*B10)+(B6*B11)*22
------------------	--------------------	--------------	-----------------------------

Turbine Transportation

Parameter	Value	Unit	Comments	Source
heavy duty truck (diesel)	1	ea		
distance travelled	71,478	km	from Fuqing China and Kuantan Malaysia to dockside and Mulgrave NS to wind turbine laydown areas (all components) 22*19*171 *****	
freight weight	35.2	tonnes	estimate of each component, (B5 + B6) tonnes/19 components per WT	
Marine Cargo and Containers (diesel)	456,049	km	from Quanzhou China and Kuantan Malaysia to Mulgrave NS (includes 22 WT) 20729.5*22 *****	www.oceanlook.net/map
distance travelled				
freight weight	668.1	tonnes	B5	

Emission Factors

Parameter	Value	Unit	Comments	Source
heavy duty truck (diesel)	130.8	g CO2e/T.km	Freight emissions for calculating GHGs from freight shipment(GHG Genius v5.2c)	
conversion factor	0.000001	T CO2e/T.km	1 g = 0.000001 tonnes	
Emissions	328.75	T CO2e		
Marine Cargo and Containers (diesel)	15.1	g CO2e/T.km	Freight emissions for calculating GHGs from freight shipment(GHG Genius v5.2c), Excel: Transport, cell X229	
conversion factor	0.000001	T CO2e/T.km	1 g = 0.000001 tonnes	
Emissions	4,600.70	T CO2e	B28*B29*B36*B37	
Total WT Transportation Emissions	4929.447068	T CO2e	B23+B26	

Concrete Foundation

Parameter	Value	Unit	Comments	Source
Concrete Production Quantity	2132	tonne/per WT	based on a volume of 955 m3 per WT pad and density of 2.4 T/m3 source Nordex	E0004109735 3 CC01 EN Foundations Delta4000 PDF Foundation (Engineering) Civil Engineering
Concrete transport	16.8	T	16.8 tonnes /truck	
Concrete truck	127	truckloads/ per WT		
Distance travelled (freight)	23	km	based on one way trip from concrete batch plant (Quality Concrete in Antigonish) to each WT pad	
Distance travelled (no freight)	23	km	based on one way trip from each WT pad to concrete batch plant (Quality Concrete in Antigonish)	

steel rebar quantity	172.5	tonne	based on an average steel content per base of 7% rebar , pipe , screws source: Nordex	LCA Report - EPD of a Nordex wind farm with Delta4000 N163-6.X turbines (confidential data in Annex B).pdf
rebar transport	21.25	T	21.25 tonnes /truck	
rebar truck	8	trucks per WT		
Distance travelled (freight)	230	km	based on a one way trip from the rebar supplier in Dartmouth to each WT pad	
Distance travelled (no freight)	230	km	based on a one way trip from each WT pad to rebar supplier, in Dartmouth	

Emission Factors

Parameter	Value	Unit	Comments	Source
concrete production	300	g CO2e/kg		
general steel	2.57	TCO2e/T	source: Inventory of Carbon and Energy v2.0 for a mixture of steel types	
concrete truck (freight)	130.8	g CO2e/T.km	Freight emissions for calculating GHGs from freight shipment(GHG Genius v5.2c)	
concrete truck (no freight)	1,203	g CO2e/km	Emissions for calculating GHGs where the volume of fuel consumed is unknown but the distance travelled is known source: GHGenius v5.2d	
steel or wood truck (freight)	130.8	g CO2e/T.km	Freight emissions for calculating GHGs from freight shipment(GHG Genius v5.2d)	
#VALUE!	1,203	g CO2e/km	Emissions for calculating GHGs where the volume of fuel consumed is unknown but the distance travelled is known source: GHGenius v5.2d	
conversion factor	0.00	T CO2e/T.km	1 g = 0.000001 tonnes	
concrete production emissions	14,068.30	T CO2e	B43*1000*B56*B62*22	
steel production emissions	9,754.06	T CO2e	B48*B57*22	
Concrete truck (freight) emissions	141.08	t CO2e	B44*B45*B46*B58*B62*22	
Concrete truck (no freight) emissions	77.23	T CO2e	B45*B47*B59*B62*22	
steel truck (freight) emissions	114.18	T CO2e	B49*B50*B51*B60*B62*22	
steel truck (no freight) emissions	49.42	T CO2e	B50*B52*B61*B62*22	
Total WT Foundation Emissions	24,204.27	T CO2e	B63+B64+B65+B66+B67+B68	

Appendix C - GHG Calculations: Emissions Summary

Total Emissions Turbines and Bases 65,448.49 T CO2e B20+B39+B69

Electrical Infrastructure

Parameter	Value	Unit	Comments	Source
substation transformers steel		37 tonnes	typical for a 50 MVA transformer source ABB.com	
substation transformers copper		9 tonnes	typical for a 50 MVA transformer source ABB.com	
substation transformers oil		17 tonnes	typical for a 50 MVA transformer source ABB.com	
substation transformer pad concrete		16.1 tonnes	based on a volume of 6.7 m3 per pad and density of 2.4 T/m3 source ABB.com	
substation transformer pad rebar		1.1 tonnes	based on an average steel content per pad of 7% rebar	
copper carbon intensity		2.71 TCO2E/T	source: Inventory of Carbon and Energy v4.1	
mineral oil carbon intensity		0.00189 TCO2e/litre	source: BEES carbon footprint calculator	
mineral oil density		830 kg/1000 litres	source: Wikipedia	
remaining substation steel		272 tonnes	circuit breakers , relays, switches, cabling, supports, lighting, lightning protection, fencing, control building, transmission bus, pad rebar	
remaining substation concrete		56.4 tonnes	remaining equipment and building pads	
aluminum carbon intensity		13.06 TCO2E/T	source: carbonchain.com for aluminum produced in Canada.	
switching station steel		272 tonnes	circuit breakers , relays, switches, cabling, supports, lighting, lightning protection, fencing, pad rebar	
switching station concrete		56.4 tonnes	equipment pads	
230 kv transmission tower steel		0 tonnes	typical for a 33m high guyed portal tangent steel lattice design (102 assumed, 20.4km T-Line and 200m between each tower)	
230 kv transmission tower steel		10 tonnes	typical for a 33m high freestanding steel lattice design (4 assumed)	
guyed tower concrete		0 tonnes	4m2 x 2m deep (typ for 3 per tower) (102 towers assumed)	
freestanding tower concrete		307.2 tonnes	4m2 x 2m deep (typ for 4 per tower) (4 towers assumed)	
34.5 kv acsr distribution cable steel		20.7 tonnes	total cable length estimate is 115 km for 4 circuits. 85 km at 163 kg/km and 30 km at 228 kg/km steel	
34.5 kv acsr distribution cable aluminum		141.7 tonnes	total cable length estimate is 115 km for 4 circuits. 85 km at 1119 kg/km and 30 km at 1553 kg/km aluminum	
230 kv acsr transmission cable steel		31.4 tonnes	total cable length estimate is for 2 20.4 km transmission lines (3 cables in 1 line) in parallel with a 10% allowance 233 kg/km steel	
230 kv acsr transmission cable aluminum		209.5 tonnes	total cable length estimate is for 2 20.1 km transmission lines (3 cables in 1 line) in parallel with a 10% allowance 1556 kg/km aluminum	
steel production emissions		2134.0 T CO2e	$((B75*3)+(B79*3)+B83+B86+(B88*102)+(B89*12)+B92+B94)*B57$	
Concrete production emissions		140.49 T CO2e	$((B78*3)+B84+B87+B90+B91)*B56/1000$	
Copper production emissions		73.17 T CO2e	$B76*B80*3$	
Mineral oil production emissions		116.13 T CO2e	$((B77*1000)/B82)*B81*3*1000$	
aluminum production emissions		4586.73521 T CO2e	$(B93+B95)*B85$	
230 kv wood H frames		640 tonnes	assume 5 poles per frame and 1 frame each 150m . 1 tonne per pole . 128 frames needed	
metal truck loads		45 ea	Assume all metal components are shipped by truck from Dartmouth 230 km each way, max load 25 T	
wood pole loads		21 ea	Assume all wood poles are shipped from Truro 130 km each way , max load 30 T	
mineral oil loads		2 ea	assume all mineral oil is shipped by truck from Dartmouth 140 km each way, max load 25 T	
concrete truck loads		28 ea	$((B78*3)+B84+B87+B90+B91)/B44$	
metal truck (freight) emissions		33.95 T CO2e	$B51*B60*B62*25*B102$	
metal truck (no freight) emissions		12.49 T CO2e	$B52*B61*B62*B102$	
oil truck (freight) emissions		1.53 T CO2e	$B51*B60*B62*25*B103$	
oil truck (no freight) emissions		0.56 T CO2e	$B52*B61*B62*B103$	
Concrete truck (freight) emissions		1.41 T CO2e	$B44*B46*B58*B62*B104$	
Concrete truck (no freight) emissions		0.77 T CO2e	$B47*B59*B62*B104$	
wood pole truck (freight) emissions		10.88 T CO2e	$130*B60*B62*30*B103$	
wood pole truck (no freight) emissions		3.34 T CO2e	$130*B61*B62*B103$	
Total Emissions Electrical Infrastructure	7,101.3	T CO2e	B96+B97+B98+B99+B100+B105+B106+B107+B108+B109+B110	
Total emissions	72,549.8	T CO2e	B71+B112	

Appendix C - GHG Calculations: Turbine Weight

	Hub Height (m)	weight: Turbine Tower (tonnes)	weight: Nacelle (tonnes)	weight: Hub and Nose cone assembly (tonnes)	weight: Blades (tonnes)	Total
163 N5.X	108	334.7	139.9	54.5	90	619.1
163 N6.X	118	365.7	152.9	59.5	90	668.1

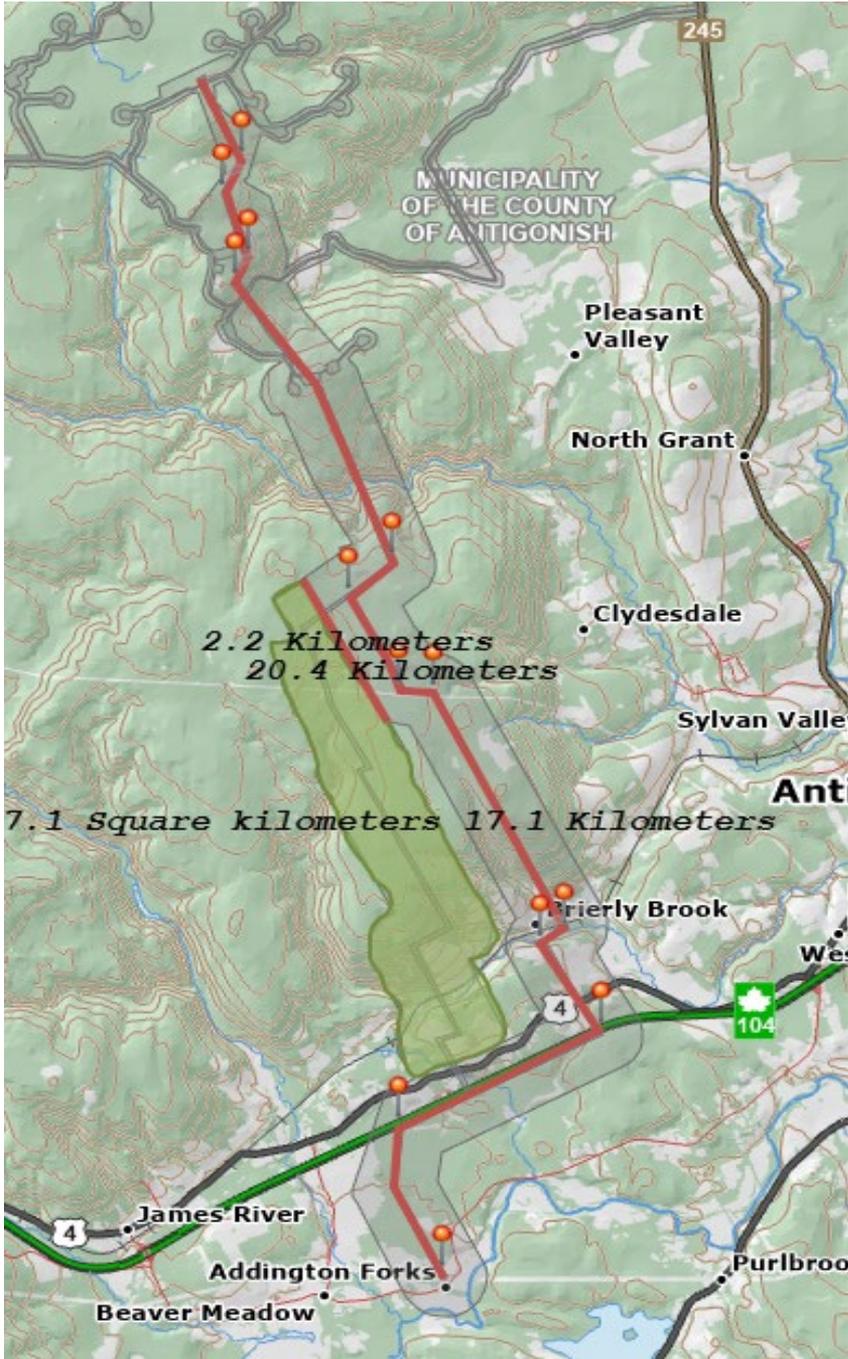

turbine weights
